We also operate the world's first high-purity hydrogen storage cavern, coupled with an unrivaled pipeline network of approximately 1,000 kilometers to reliably supply our customers. With close to 200 hydrogen refueling stations and 80 hydrogen electrolysis plants worldwide, we are at the forefront of the energy transition.

The main differences between the four types of tanks are in the materials used to manufacture them. For mobile applications of hydrogen, the Type 4 tank is commonly used because it provides the highest storage density, making it ideal for passenger cars and heavy-duty commercial vehicles.

Storage of hydrogen as a gas typically requires high-pressure tanks (350-700 bar [5,000-10,000 psi] tank pressure). Storage of hydrogen as a liquid requires cryogenic temperatures because the boiling point of hydrogen at one atmosphere pressure is -252.8°C . Hydrogen can also be stored on the surfaces of solids (by adsorption) or within ...

Hydrogen Fuel Cost: As of recent data, hydrogen fuel costs approximately \$10-\$15 per kilogram. The price can fluctuate based on production methods, market demand, and regional availability. Storage Tank Cost: The cost of a hydrogen storage tank itself depends on its type, size, and material. A Type 4 hydrogen tank, which is lightweight and made of advanced ...

Hydrogen is one of the key solutions to tackle the mobility challenge, and it is particularly well suited to answer the needs of intensive mobility, heavy transport and industry.

Dihydrogen (H₂), commonly named "hydrogen", is increasingly recognised as a clean and reliable energy vector for decarbonisation and defossilisation by various sectors. The global hydrogen demand is projected to increase from 70 million tonnes in 2019 to 120 million tonnes by 2024. Hydrogen development should also meet the seventh goal of "affordable and clean energy" of ...

On-site hydrogen storage is used at central hydrogen production facilities, transport terminals, and end-use locations. Storage options today include insulated liquid tanks and gaseous storage tanks. The four types of common high pressure gaseous storage vessels are shown in the table. Type I cylinders are the most common.
