

Inorganic porous material is usually a good adsorption carrier serving for storage of solid-liquid phase change materials. As one of the largest types of industrial waste resource, reutilization of fly ash (FA) is an important way to protect environment, save energy and reduce emissions. In this study, a novel shape-stabilized phase change material (SSPCM) composed ...

The rapid development of economy and society has involved unprecedented energy consumption, which has generated serious energy crisis and environmental pollution caused by energy exploitation [1, 2] order to overcome these problems, thermal energy storage system, phase change materials (PCM) in particular, has been widely explored [3, 4].Phase ...

Phase change energy storage plays an important role in the green, efficient, and sustainable use of energy. Solar energy is stored by phase change materials to realize the time and space ...

As evident from the literature, development of phase change materials is one of the most active research fields for thermal energy storage with higher efficiency. This review ...

Phase change material thermal energy storage is a potent solution for energy savings in air conditioning applications. Wherefore thermal comfort is an essential aspect of the human life, air conditioning energy usages have soared significantly due to extreme climates, population growth and rising of living standards.

Thermal energy storage technology is an effective method to improve the efficiency of energy utilization and alleviate the incoordination between energy supply and demand in time, space and intensity [5].Thermal energy can be stored in the form of sensible heat storage [6], [7], latent heat storage [8] and chemical reaction storage [9], [10].Phase change ...

Energy security and environmental concerns are driving a lot of research projects to improve energy efficiency, make the energy infrastructure less stressed, and cut carbon dioxide (CO<sub>2</sub>) emissions. One research goal is to increase the effectiveness of building heating applications using cutting-edge technologies like solar collectors and heat pumps. ...

Phase change materials (PCM) can absorb or release heat according to the change of ambient temperature so as to achieve the purpose of regulating temperature and saving energy [1, 2].PCMs have been widely used in construction, solar energy storage, medicine, agriculture and other fields.

The materials used for latent heat thermal energy storage (LHTES) are called Phase Change Materials (PCMs) [19]. PCMs are a group of materials that have an intrinsic capability of absorbing and releasing heat during phase transition cycles, which results in the charging and discharging [20].

Solar energy is a kind of inexhaustible clean and renewable energy, but its intermittency and dis-continuity

restrict its development and commercial application to a certain extent. Latent heat storage technology based on organic Phase Change Materials (PCMs) can not only perfectly solve \* ...

Energy storage technologies include sensible and latent heat storage. As an important latent heat storage method, phase change cold storage has the effect of shifting peaks and filling valleys and improving energy efficiency, especially for cold chain logistics [6], air conditioning [7], building energy saving [8], intelligent temperature control of human body [9] ...

Intelligent phase change materials for long-duration thermal energy storage Peng Wang,<sup>1</sup> Xuemei Diao,<sup>2</sup> and Xiao Chen<sup>2,\*</sup> Conventional phase change materials struggle with long-duration thermal energy storage and controllable latent heat release. In a recent issue of *Angewandte Chemie*, Chen et al. proposed a new

In the context of dual-carbon strategy, the insulation performance of the gathering and transportation pipeline affects the safety gathering and energy saving management in the oilfield production process. PCM has the characteristics of phase change energy storage and heat release, combining it with the gathering and transmission pipeline not only improves ...

In the sensible type, the phase of storage substance does not change during charging or discharging. In the latent type, the principle adopted to store energy is the phase change. Therefore, the substance that is used in the thermal latent heat energy storage is known as phase change material [3].

Phase change material for solar-thermal energy storage is widely studied to counter the mismatch between supply and demand in solar energy utilization. Here, authors introduce optical waveguide to ...

Energy storage with PCMs is a kind of energy storage method with high energy density, which is easy to use for constructing energy storage and release cycles [6] applying cold energy to refrigerated trucks by using PCM has the advantages of environmental protection and low cost [7]. The refrigeration unit can be started during the peak period of renewable ...

Phase-changing materials are nowadays getting global attention on account of their ability to store excess energy. Solar thermal energy can be stored in phase changing material (PCM) in the forms of latent and sensible heat. The stored energy can be suitably utilized for other applications such as space heating and cooling, water heating, and further industrial processing where low ...

Solar energy is a clean and inexhaustible source of energy, among other advantages. Conversion and storage of the daily solar energy received by the earth can effectively address the energy crisis, environmental pollution and other challenges [4], [5], [6], [7]. The conversion and use of energy are subject to spatial and temporal mismatches [8], [9], such as ...

The current energy crisis has prompted the development and utilization of renewable energy and energy storage material. In this study, levulinic acid (LA) and 1,4-butanediol (BDO) were used to synthesize a novel

levulinic acid 1,4-butanediol ester (LBE) by both enzymatic and chemical methods. The enzymatic method exhibited excellent performance ...

Solar energy is a high-priority clean energy alternative to fossil fuels in the current energy landscape, and the acquisition, storage, and utilization of solar energy have long been the subject of research [[1], [2], [3], [4]]. The development of new materials has facilitated the technique for utilizing solar energy [5], such as phase change materials (PCMs), which have ...

1.2 Types of Thermal Energy Storage. The storage materials or systems are classified into three categories based on their heat absorbing and releasing behavior, which are- sensible heat storage (SHS), latent heat storage (LHS), and thermochemical storage (TC-TES) [].1.2.1 Sensible Heat Storage Systems. In SHS, thermal energy is stored and released by ...

Phase change material (PCM)-based thermal energy storage significantly affects emerging applications, with recent advancements in enhancing heat capacity and cooling power. This perspective by Yang et al. discusses PCM thermal energy storage progress, outlines research challenges and new opportunities, and proposes a roadmap for the research community from ...

Research on thermal energy storage has been ongoing for the last decades. Thermal energy can be stored either as sensible heat, thermochemical energy, or latent heat using a phase change material (PCM). PCMs are organic or inorganic compounds, which melt and solidify with a melting range suitable for the specific application.

The phase equilibrium studies for low-temperature energy storage applications in our group started with the work developed for the di-n-alkyl-adipates []. A new eutectic system was found and proved to be a good candidate as Phase Change Material (PCM) [] this paper, two binary systems of n-alkanes are being presented also as eutectic systems suitable for cold ...

Photothermal phase change energy storage materials (PTPCESMs), as a special type of PCM, can store energy and respond to changes in illumination, enhancing the efficiency of energy systems and ...

Solar energy is a renewable energy source that can be utilized for different applications in today's world. The effective use of solar energy requires a storage medium that can facilitate the storage of excess energy, and then supply this stored energy when it is needed. An effective method of storing thermal energy from solar is through the use of phase change ...

The PTT and supercooling of PCM should be able to complete the entire melting/solidification process when it is used in building envelopes. Solid-liquid PCM can be better adapt to the building environment for its higher heat storage density and lower volume rate, which is widely used in building energy field [15] contrast, inorganic PCM suffers from the defects ...
