In this paper, a novel compressed air energy storage (CAES) system integrated with a waste-to-energy plant and a biogas power plant has been developed and evaluated. In the charging process, the feedwater of the waste-to-energy plant recovers the compressed heat of the compressed air in the CAES system.

Overview Types Compressors and expanders Storage History Projects Storage thermodynamics Vehicle applications Compressed-air-energy storage (CAES) is a way to store energy for later use using compressed air. At a utility scale, energy generated during periods of low demand can be released during peak load periods. The first utility-scale CAES project was in the Huntorf power plant in Elsfleth, Germany, and is still operational as of 2024 . The Huntorf plant was initially developed as a load balancer for fossil-fuel-generated electricity
