Energy density is a measure of how much energy is stored in a given space.

Energy Storage in Capacitors (contd.) $W = \frac{1}{2} CV^2$ It shows that the energy stored within a capacitor is proportional to the product of its capacitance and the squared value of the voltage across the capacitor. Recall that we also can determine the stored energy from the fields within the dielectric: $W = \frac{1}{2} \epsilon_0 \epsilon_r \int E^2 dV$
