

Italy's new energy storage production base

On December 9, 2023 the Italian Government approved Law Decree No. 181/2023 (the "Energy Decree"), which was converted with amendments into Law No. 11 of February 2, 2024. The purpose of the Energy Decree is to improve Italy's energy security, promote the use of renewable energy sources, and support energy-intensive companies.

This article will detail the top 10 energy storage manufacturers in Italy, including Infinity Electric Energy Srl, Poseidon HyPerES, Apio, Zeromy, Magaldi Green Energy srl, ESE, Enel, Sonolis, Green Energy Storage Srl, Energy Dome ...

This month we speak to Marco Petrone, CEO of Telis Energy Italy, about the role of Battery Energy Storage Systems (BESS) in fast-tracking the future of energy in Italy. Q: Marco, how are Battery ...

The urgency for developing energy storage in North America, along with the economics of energy storage projects, surpasses that of Latin America. Latin America faces constraints such as limited available land and the absence of a regulatory system, making it a longer journey to reach the period of installed demand for energy storage volume.

To develop utility-scale electricity storage facilities, the Italian Government set up a scheme that was approved by the European Commission at the end of 2023. Italy will promote investments in utility scale electricity storage to reach at least 70 GWh, and worth over Euro 17 bn, in the next ten years.

In 2023, residential energy storage continued to dominate Italy's energy storage landscape, representing the largest application scenario for newly added installations. ...

The Current State of Solar Energy Storage in Italy. Italy saw a substantial increase in newly installed household energy storage units, reaching 69,500 units with a capacity of 676 MW/914 MWh in the second quarter of 2023, a ...

GES is developing a breakthrough technology for energy storage systems to accelerate the energy transition towards zero emissions. The new product is based on largely available and eco-friendly materials, high level of safety, long life-cycle and ...

BESS, or battery energy storage systems, are an essential element of the energy transition: the Enel Group is playing an important role in the growth of the sector, in Italy and in the other countries where it is present. There can be no real energy transition in Italy without electricity storage systems.

Terna aims to award around 9GW (71GWh) of new grid-scale energy storage capacity by 2030 to increase grid flexibility as intermittent wind and PV generation capacity increases. Since 2022, Italy has attracted

strong interest from local and European investors in ...

This is the second deep dive in our four-part series that explores why battery-based energy storage is key to addressing Southern Europe's grid flexibility challenges. This article delves into the intricacies of the Italian energy market and how the current high reliance on gas-fired power generation puts the country's decarbonization targets at risk and impacts ...

Beyond the optimal management of the existing pumped storage systems, new storage systems for almost 1000 MW in production, between hydroelectric and electrochemical, have been estimated to be necessary already in the medium term (around 2023). For 2030, preliminary estimations indicate a need,

Energy Storage. Local industry contacts and U.S. companies in the sector have indicated to CS Italy a need for long-duration energy-storage solutions. As of April 2023, Italy had more than 300,000 storage systems, with a total power of about 2,350 MW and a maximum capacity of about 4,000 MWh.

To meet the European Union (EU)'s energy and climate greenhouse gas emissions targets by 2030, EU countries need to establish a 10-year integrated national energy and climate plan between 2021 and 2030. Italy has one in place called PNIEC.

The European Union (EU) Commission has approved a state aid scheme aiming to fund the rollout of over 9GW/71GWh of energy storage in Italy. The scheme totalling ...

TEMOA-Italy is a model instance focused on the Italian energy system and based on energy statistics provided by the International Energy Agency (IEA) for the year 2006 (the "base year" of the time horizon for the analyses) [79], as extensively described in [63]. It allows the exploration of future energy scenarios on a time scale up to the ...

In this process, electricity storage developers will vie for support by submitting offers based on the lowest requested aid per offered capacity volume. This initiative is open to all technologies that meet the performance criteria established by the Italian Transmission System Operator (TSO) and endorsed by the Italian Energy Regulator.

Italy will promote investments in utility scale electricity storage to reach at least 70 GWh, and worth over Euro 17 bn, in the next ten years. The new storage capacity will be acquired through tenders published by Terna, the manager of Italy's high voltage grid. The next tender will be released in 2024.

Nidec Energy develops integrated battery storage solutions and environmentally friendly products. Mass production will start in 2025, with more than 8 GWh per year of battery block modules and solutions to be produced from 2027.

Italy's new energy storage production base

Global energy storage developer Eku Energy has signed a Framework Agreement with Renera Energy, a European consulting, trading and development group. The agreement, signed on ...

This report is part of a series that analyses the battery storage market in select European countries. Italy has both a rapidly growing utility-scale market as well as a flourishing customer-sited battery storage market. Customer-sited storage adoption has been mainly driven by a combination of high electricity prices and generous tax incentives.

oSelf-consumption and shared energy: User Efficiency Systems -"Sistemi Efficienti di Utente"(SEU, ARERA del. 578/2013 and following modifications) New ways to share energy (jointly acting renewable self-consumers and renewable energy communities, ARERA del. 318/2020) oCapacity Market: no storage in 2022 bid, only 100MW in 2023 bid.

It is not a bold statement to say that 2024 will be the year of Renewable Energy Communities in Italy. The introduction of Renewable Energy Communities into the Italian regulatory process dates back to "Milleproroghe" Decree 162/2019, (converted by Law No. 8/2020 of Feb. 28, 2020), which transposes the European RED II Directive (2018/2001/EU)..The ...

Italy's appetite for energy storage seems to be growing by the month. ... Terna said it would need almost 8.9 GW and 71 GWh of new grid-scale energy storage capacity by 2030 to meet ... "Storage will make it possible to "structurally" shift part of the production of variable renewable energy sources from the hours of high resource ...

This necessity is particularly evident in the case studies of Italy, Oman, and Morocco, each of which faces unique challenges and strategies in their energy storage implementations. Italy's energy landscape has been significantly impacted by geopolitical events, notably the disruption of natural gas supplies following Russia's invasion of ...

Established in early 2022 as a solar PV development platform within the SUSI Energy Transition Fund, ReFeel New Energy currently boasts over 750MW of battery storage capacity. The company is eager to expand into the Italian BESS market, an area that Energy-storage.news has already reported to have considerable potential. Research firm LCP Delta ...

Within Germany's contributions, household energy storage reached 1.2GW, large-sized energy storage accounted for 0.2GW, and industrial and commercial energy storage amounted to 0.1GW. As the leading energy storage market in Europe, Germany's efforts constituted around 34% of Europe's total installed energy storage capacity in 2022.

Executive summaryItaly's energy system has changed notably since 2010 and today the country's energy mix includes more natural gas and renewable energies and less coal and oil. From a lower base than the IEA

Italy s new energy storage production base

average, Italy's energy intensity, measured by the ratio of total final consumption (TFC) to gross domestic product (GDP), declined by 15%...
