Thermal Energy Storage Tank produces and stores the thermal energy in the form of chilled water during off-peak hour. During peak hour, the chilled water is pumped from the bottom of the storage tank and distributed to the facility, whilst the warmer water enters from the top of the tank hence smoothing out the energy consumption of the chiller system.

New Energy Nexus is the world's leading ecosystem of funds and accelerators supporting diverse clean energy entrepreneurs. In Indonesia, New Energy Nexus works to support the development of ecosystems that can support the needs of not only innovators, startups, and entrepreneurs, but also other stakeholders in the clean energy and climate ...
