Among various energy conversion and storage systems, lead-free ceramic dielectric capacitors emerge as a preferred choice for advanced pulsed power device ... Fei Yan, Jin Qian, Simin Wang, Jiwei Zhai With the rapid development of economic and information technology, the challenges related to energy consumption and environmental pollution ...

Thermal energy storage has attracted more and more attentions due mainly to its ability of peak load shifting. Shell-and-tube configuration is a typical heat exchanger for thermal energy storage. ... [2] Yang X, Bai Q, Zhang Q, Hu W, Jin L and Yan J 2018 Thermal and economic analysis of charging and discharging characteristics of composite ...

Yang, M., Ren, W., Jin, Z. et al. Enhanced high-temperature energy storage performances in polymer dielectrics by synergistically optimizing band-gap and polarization of dipolar glass.

Fei Yan 1, Jin Qian 2, Jinfeng Lin 2, Guanglong Ge 2, Cheng Shi 2, Jiwei Zhai 2 ... Furthermore, the energy storage efficiency maintains high values ($\geq 96\%$) within 1-100 Hz and the power density as high as 188 MW cm⁻³ under 400 kV cm⁻¹. These results indicate that the designed lead-free ceramics with a sandwich structure possess superior ...

DOI: 10.1021/acssuschemeng.0c01586 Corpus ID: 218961933; Exergy Analysis of Concentrated Solar Power Plants with Thermochemical Energy Storage Based on Calcium Looping @article{Chen2020ExergyAO, title={Exergy Analysis of Concentrated Solar Power Plants with Thermochemical Energy Storage Based on Calcium Looping}, author={Xiaoyi Chen and ...

Compared with electrochemical energy storage techniques, electrostatic energy storage based on dielectric capacitors is an optimal enabler of fast charging-and-discharging speed (at the microsecond level) and ultrahigh power density (1-3). Dielectric capacitors are thus playing an ever-increasing role in electronic devices and electrical power systems.

With the increasing demand for energy and to decrease the consumption of fossil fuel and its derivatives, renewable energy sources are necessary in the current context of environmentally friendly energy landscape (solar, wind, and hydroelectric power) [1], [2], [3], [4]. Electrochemical energy storage devices (EESDs) such as batteries and supercapacitors ...

Developing advanced electrolytes is critical for stabilizing electrode/electrolyte interfacial reactions and thus extending cycling stability of sodium (Na) batteries, especially when a high-voltage ...

@article{Chen2023AnUE, title={An ultrahigh energy storage efficiency and recoverable density in Bi_{0.5}Na_{0.5}TiO₃ with the modification of Sr_{0.85}La_{0.1}TiO₃ via viscous polymer process}, author={Fukang Chen and Lishun Yang and Haoran Feng and Qin Li and Xin Qian Zeng and Kun Yu and Chunlin Song and Yan Yan and Li Jin and Dou Zhang}, ...

After returning to China in 2016 and getting his Ph.D. degree, Yang joined Zhengzhou University as a faculty member and started building his own research group on grid-scale electrical energy storage. This area is critical for the storage and utilization of intermittent electricity produced by renewable energy sources such as solar and wind power.

As a novel electrochemical power resource, sodium-ion battery (NIB) is advantageous in abundant resources for electrode materials, significantly low cost, relatively high specific capacity and efficiency. Therefore, NIB is regarded as a competitive candidate for large-scale energy storage usage and has potential for improving renewable energy resources grid-connected ...

His current research interest is to explore novel two-dimensional materials for flexible energy storage. Jing Yan is working toward her Ph.D. degree in School of Chemistry and Chemical Engineering at Northwestern Polytechnical University, currently an exchange Ph.D. in Prof. John Wang's research group in the Department of Materials Science ...

Yan also serves as one of the officers for the company. Previously, Yan served as the vice president of finance in the Asia Pacific region. In the past 20 years with Eaton, Yan has focused on investor relationship, accounting, tax, treasury, business strategy, green-field set up, M& A and post-acquisition integration.

The sodium ion battery (NIB) is a promising alternative technology for energy storage systems because of the abundance and low cost of sodium in the Earth's crust. However, the limited cycle life a... Recently Viewed close modal. ...

Semantic Scholar extracted view of "Progress and outlook on lead-free ceramics for energy storage applications" by Fei Yan et al. ..., title={Progress and outlook on lead-free ceramics for energy storage

applications}, author={Fei Yan and Jin Qian and Simin Wang and Jiwei Zhai}, journal={Nano Energy}, year={2024}, url={https://api ...}

Owing to the high power density, eco-friendly, and outstanding stability, the lead-free ceramics have attracted great interest in the fields of pulsed power systems. Nevertheless, the low energy storage density of such ceramics is undoubtedly a severe problem in practical applications. To overcome this limitation, the lead-free ceramics with gradient structures are designed and ...

one critical requirement is to develop high-energy, safe and low-cost rechargeable batteries for electric transportation and grid energy storage. Mg rechargeable batteries (MgRBs) stand out as a promising candidate beyond lithium ion battery technologies due to high volumetric energy density, resource abundance, and the

Zinc-air batteries deliver great potential as emerging energy storage systems but suffer from sluggish kinetics of the cathode oxygen redox reactions that render unsatisfactory cycling lifespan. The exploration on bifunctional electrocatalysts for oxygen reduction and evolution constitutes a key solution, where rational design strategies to ...

As a result, an ultrahigh recoverable energy storage density of 9.05 J cm^{-3} and a near-ideal energy storage efficiency of 97% are simultaneously achieved under 710 kV cm^{-1} . Furthermore, the energy storage efficiency maintains high values ($\geq 96\%$) within 1-100 Hz and the power density as high as 188 MW cm^{-3} under 400 kV cm^{-1} .

Enhanced energy storage performance, with recoverable energy density of 4.2 J cm^{-3} and high thermal stability of the energy storage density (with minimal variation of $\leq \pm 5\%$) over 20-120 $^{\circ}\text{C}$...

DOI: 10.1016/j.ceramint.2022.09.208 Corpus ID: 252422483; Microstructure-driven excellent energy storage NaNbO_3 -based lead-free ceramics @article{Yang2022MicrostructuredrivenEE, title={Microstructure-driven excellent energy storage NaNbO_3 -based lead-free ceramics}, author={Weiwei Yang and Huarong Zeng and Fei Yan and Jin Qian and Kun Zhu and Kunyu ...}

Li_2S , a fully lithiated state of sulfur cathode with high capacity, is promising for lithium sulfur battery or lithium ion battery. To further decrease the cost and improve the utilization, single atomic Co catalyst is synthesized and embedded in inexpensive converted- Li_2S nanocomposite. Theoretical simulations and electrochemical measurements demonstrate ...

Dr. Jin Yan originally came from Tianjin China. She is now a Senior Product Development Engineer of General Capacitor in charge of new product design and related research work. ... With her expertise in energy storage and harvesting research field, she has published 10 peer-reviewed journal papers and presented her work in more than 10 ...
