

Shipboard electric propulsion systems experience large power and torque fluctuations on their drive shaft due to propeller rotational motions and waves. This paper ...

Control and Optimization of Electric Ship Propulsion Systems with Hybrid Energy Storage. dc ntributor thor: Hou, Jun: dc.date.accessioned: 2018-01-31T18:17:57Z: ... Without proper control strategies, the HESS solution could be worse than a single energy storage system solution. The proposed HESS, when introduced into an existing shipboard ...

Downloadable (with restrictions)! In recent years, the severe environmental degradation and high levels of fossil fuel consumption linked to conventional ship energy systems have drawn attention to the advancement of alternative ship energy systems. Consequently, ship energy systems based on the use of an electrical microgrid are coming to the fore as an increasingly popular ...

Shipboard electric propulsion systems experience large power and torque fluctuations on their drive shaft due to propeller rotational motions and waves. This paper explores new solutions to address the fluctuations by integrating a hybrid energy storage system (HESS) and exploring coordinated power management. A propeller and ship dynamic model, which captures the ...

The hybrid energy storage system composed of an energy-type energy storage device and a power-type energy storage device is an efficient system for energy and power management that gives full play to the durability of the energy-type energy storage and the rapidity of the power-type energy storage. It also greatly improves the comprehensive ...

Abstract A hybrid energy system (HES) including hydrogen fuel cell systems (FCS) and a lithium-ion (Li-ion) battery energy storage system (ESS) is established for hydrogen fuel cell ships to follow fast load transients. An energy management strategy (EMS) with hierarchical control is presented to achieve proper distribution of load power and enhance ...

The typical structure of standalone PV system is presented in Fig. 1, where PV cells are interconnected and encapsulated into modules or arrays that transform solar energy into electricity. The nonlinear electrical characteristic of PV cells and intermittency of solar radiation require integration of intermediate energy storage system (ESS) in order to provide stable ...

ABSTRACT. Electric systems for naval applications create a challenge for the power system associated control. When incorporating loads with a high-power ramp rate within what is essentially an islanded microgrid, energy sources that supplement generators must be used due to the ramp rate constraints of the generators; this is where energy storages play a ...

Energies 2023, 16, 1122 2 of 25 shipping by at least 40% by 2030, pursuing efforts towards 70% by 2050

compared to 2008. The EU has proposed to include shipping in the EU Emissions Trading System ...

Consequently, ship energy systems based on the use of an electrical microgrid are coming to the fore as an increasingly popular alternative solution. However, managing the energy flows within a shipboard microgrid can be highly challenging due to the multiple energy sources (including renewable energy sources) and types of loads involved ...

This study presents the multiple energy storage elements usability for ships using a passive hybrid topology. The considered hybridisation is based on a passive parallel topology connecting NiMH ...

This paper explores new solutions to address the fluctuations by integrating a hybrid energy storage system (HESS) and exploring coordinated power management. A propeller and ship ...

DOI: 10.1016/J.ENCONMAN.2019.111929 Corpus ID: 202034049; Adaptive model predictive control for hybrid energy storage energy management in all-electric ship microgrids @article{Hou2019AdaptiveMP, title={Adaptive model predictive control for hybrid energy storage energy management in all-electric ship microgrids}, author={Jun Hou and Ziyu Song and ...

Most mobile battery energy storage systems (MBESSs) are designed to enhance power system resilience and provide ancillary service for the system operator using energy storage.

Jun, H., Jing, S., Heath, F.H.: Mitigating power fluctuations in electric ship propulsion with hybrid energy storage system: design and analysis. ... Optimal power management with GHG emissions limitation in all-electric ship power systems comprising energy storage systems. IEEE Trans. Power Syst. 29(1 ... M., Hui, L.: Hybrid energy storage ...

In order to address the impact of propulsion-load fluctuations, hybrid energy storage system (HESS) can be a potential solution. HESS has been exploited for considerable applications, such as hybrid electric vehicle [8], micro-grid [9] and all-electric ship [10], in order to provide complementary characteristics and achieve desired performance this paper, HESS ...

The main types of ship energy system configuration that include the use of batteries are presented in subsection 5.2.3 while the main alternatives available for system control are presented and discussed in subsection 5.2.4. ... Given the space that thermal energy storage systems may occupy aboard a ship, tugs would be the most likely vessels ...

This paper proposes and implements an energy management scheme based on model predictive control to optimize the coordination between the energy storage and the power generators under high-power ramp rate conditions and results validate the proposed technique in a reduced scale, notional electric ship power system. Electrical weapons and combat systems ...

Jing ship energy storage system

The addition of a hybrid energy storage system (HESS) has emerged as a better solution. However, this approach may increase initial investment and maintenance costs, and ...

Optimization of sizing and frequency control in battery/supercapacitor hybrid energy storage system for fuel cell ship. Energy (2020) ... Jing Sun. Power-characterized shipboard hybrid energy storage system management for dynamic positioning. Ocean Engineering, Volume 298, 2024, Article 117256.

PDF | The fuel cell system (FCS) is commonly combined with an energy storage system (ESS) for enhancing the performance of the ship. Consequently, the... | Find, read and cite all the research you ...

jing ship energy storage system integration. ... Optimal Operation and Sizing of Energy Storage System for a Ship Electrical Power System . In a Ship-based power system, depending on the type of ship and its operation, load profile could be very dynamic. The dynamic load demand is met by the use of multiple diesel-generators running in parallel ...

Usually, an intelligent energy and battery management system is deployed to harness the renewable energy sources efficiently, whilst maintaining the reliability and robustness of the power system. In recent years, the battery-supercapacitor based hybrid energy storage system (HESS) has been proposed to mitigate the impact of dynamic power ...

In this paper, a battery/flywheel hybrid energy storage system (HESS) is studied to mitigate load fluctuations in a shipboard microgrid. This paper focuses on how to determine the reference ...

Results show that the proposed technique can reduce stress on the FC and lead to hydrogen savings of up to 3.5%. The aim of [52] is to optimise all-electric ships (AES) and energy storage systems ...

The all-electric ships (AES) usually employs a battery energy storage systems (ESSs) in the shipboard microgrid. However, the battery-only storage usually experiences frequent deep discharging or ...

The current trend in the shipboard power system is accommodating Energy Storage System (ESS) into the generation system that can increase ship efficiency and provide other flexible applications ...
