The GX460 has a 23 gallon fuel tank. The only thing that I can think of why they were to reduce the fuel capacity would be if there's anything underneath the vehicle which needs the space to reduce the fuel capacity by 2 gallons. Does anyone in here know the reason why Lexus reduced the fuel capacity by -2 gallons on the GX550?

Further enhancing the Lexus Hybrid Drive system's outstanding environmental credentials, the CT 200h design incorporates numerous additional energy saving and environmentally-conscious measures such as LED lighting, a lightweight, energy-efficient audio system amplifier and bamboo charcoal speakers; and the use of bio-sourced materials.

Energy is essential in our daily lives to increase human development, which leads to economic growth and productivity. In recent national development plans and policies, numerous nations have prioritized sustainable energy storage. To promote sustainable energy use, energy storage systems are being deployed to store excess energy generated from ...

Like the earlier Lexus LF-30 Electrified concept, released in 2019, this latest concept is a battery-electric vehicle (BEV), meaning that it's all-electric, with no plug-in or hybrid drive system. Engine of Parallel Hybrid system supplies power for the motor and battery.

Liquid air energy storage (LAES), as a form of Carnot battery, encompasses components such as pumps, compressors, expanders, turbines, and heat exchangers [7] s primary function lies in facilitating large-scale energy storage by converting electrical energy into heat during charging and subsequently retrieving it during discharging [8].Currently, the ...

2016 Lexus NX 200t Product Information. Lexus developed its first turbocharged gas engine, a 2.0-liter four-cylinder, in house. By pairing this new turbocharged engine with an all-new compact luxury utility vehicle, the NX 200t, Lexus injected more fun into the luxury utility vehicle lineup for 2016 model year.
