The voltage that the light fixture needs is the same as the voltage supplied from your wall. Low voltage lighting systems require lower voltage to operate than the typical power source supplies. So, if the power source in your wall outputs 120 volts, low voltage lighting fixtures require an input of just 12 or 24 volts.

There are three main configurations of electrical power networks as shown in Fig. 2 [16, 17]: Interconnected network topology is adopted in HV transmission networks to provide a secure power supply in the event of an outage, as there are multiple paths to transmit electrical power.; Ring topology includes both link arrangement
