

Mwinyiwiwa, B.M.M. DC bus voltage regulator for renewable energy based micro grid-application. International Scholarly and Scientific Research & Innovation, 2013, 7, 12, 1629-1633.

Aiming at the voltage fluctuation of DC microgrid bus caused by the power fluctuation of distributed power supply and switching of constant power load (CPL), this paper proposes a model predictive control (MPC) strategy with nonlinear observer, which is applied to bidirectional DC-DC converter for energy storage. First, a small disturbance model of the ...

In order to achieve the state of charge (SOC) balance of distributed energy storage systems (ESSs) in offshore isolated island DC microgrids and enhance the inertia and damping characteristics of DC microgrids, an SOC-based bidirectional virtual DC machine (VDCM) control is presented. The control proposed has the following three improvements. ...

transmission between energy storage battery and DC microgrid WeiweiSong, Yanfeng Chen, YongjunZhang ... nected to the DC microgrid through a bidirectional boost converter. The ELECTRONICS LETTERS 4th April 2019 Vol. 55 No. 7 pp. 402-404. voltage of the DC microgrid is  $\approx 1.5$  kV. The capacity of the ESB is

A 98.3% Efficient GaN Isolated Bidirectional DC-DC Converter for DC Microgrid Energy Storage System Applications Abstract: This paper presents a novel 400 to 12 V isolated bidirectional dc-dc converter based on a phase-shift-controlled-modified dual-active-bridge power stage. The proposed converter consists of a half-bridge and center tap ...

In DC microgrids, distributed energy storage plays a key role in stabilizing the DC bus voltage. The bidirectional DC/DC converter in the distributed energy storage system should be designed according to the voltage level and electromagnetic isolation requirements, and multiple energy storage units should be coordinated for load current distribution according ...

AC/DC, DC-DC bi-directional converters for energy storage and EV applications Ramkumar S, Jayanth Rangaraju Grid Infrastructure Systems . Detailed Agenda 2 ... (PCS) in energy storage Bi-Directional Dual Active Bridge (DAB) DC:DC Design 20 o Single phase shift modulation provides easy control loop implementation. Can be extended to dual phase ...

Standalone microgrids using Photovoltaic (PV) systems might be a feasible alternative for powering off-grid populations. However, this form of application necessitates the use of energy storage systems (ESS) to control the intermittent nature of PV production. This paper proposes a novel energy management strategy (EMS) based on Artificial Neural ...

This paper presents a non-isolated bidirectional softswitching dc-dc converter for DC microgrid energy storage synchronization. To assist the soft switching of switches and diodes, the LCL resonant circuit is

applied and an input end halfbridge boost converter is enforced. Using the voltage doubler circuit introduced on the output side, a voltage gain of 2X is achieved. Through ...

This paper presents a new control method for a bidirectional DC-DC LLC resonant topology converter. The proposed converter can be applied to power the conversion between an energy storage system and a DC bus in a DC microgrid or bidirectional power flow conversion between vehicle-to-grid (V2G) behavior and grid-to-vehicle (G2V) behavior. ...

Abstract: This paper presents a novel 400 to 12 V isolated bidirectional dc-dc converter based on a phase-shift-controlled-modified dual-active-bridge power stage. The ...

The paper proposes a novel multi-port high-gain (NMPHG) bidirectional DC-DC converter that supports DC microgrid (DC-MG) applications. The main contributions of the ...

Traditionally, the energy storage battery is connected to the photovoltaic system via a bidirectional DC-DC converter. However, due to the unique structure of the quasi-Z ...

The steady and transient performance of a bidirectional DC-DC converter (BDC) is the key to regulating bus voltage and maintaining power balance in a hybrid energy storage system. In this study, the state of charge of the energy storage element (ESE) is used to calculate the converter current control coefficient (CCCC) via Hermite interpolation. Moreover, the ...

Selection of Bidirectional DC-DC Topology for DC Microgrid Energy Storage Systems Abstract: This paper focuses on bidirectional DC/DC converters, which are essential components for ...

Different energy storage technologies have been used for microgrid stability enhancement such as batteries, supercapacitors [12, 13], flywheels and superconducting magnetic energy storage . Batteries are the most promising storage device having high-energy density used for long-term energy supply [ 16, 17 ].

Distributed energy storage needs to be connected to a DC microgrid through a DC-DC converter [13,14,16,19], to solve the problem of system stability caused by the change of battery terminal voltage ...

This paper focuses on bidirectional DC/DC converters, which are essential components for bidirectional energy transfer between different voltage levels. Firstly, the paper ...

We design the Microgrid, which is made up of renewable solar generators and wind sources, Li-ion battery

storage system, backup electrical grids, and AC/DC loads, taking into account all of the ...

This paper presents a novel 400 to 12 V isolated bidirectional dc-dc converter based on a phase-shift-controlled-modified dual-active-bridge power stage, which has promising performance for low-voltage high-current applications. ... A 98.3% Efficient GaN Isolated Bidirectional DC-DC Converter for DC Microgrid Energy Storage System ...

Furthermore, bidirectional power flow capabilities allow the connection of energy storage devices, such as batteries and ultra-capacitors, to the bi-polar DC microgrid. The proposed system is verified through simulations and validated on a lab-scale prototype.

PI-controller-based hybrid energy storage system for a DC microgrid is proposed for the effective utilization of renewable power. In this model, the proposed optimal PI controller is developed using

3 &#0183; This study focuses on microgrid systems incorporating hybrid renewable energy sources (HRESs) with battery energy storage (BES), both essential for ensuring reliable and ...

A model predictive current controlled bidirectional three-level DC/DC converter for hybrid energy storage system in DC microgrids. IEEE Trans. Power Electron. 34 (5), 4025-4030 (2019).

Battery energy storage systems (BESSs) can control the power balance in DC microgrids through power injection or absorption. A BESS uses a bidirectional DC-DC converter to control the power flow to/from the grid. On the other hand, any fault occurrence in the power switches of the bidirectional converter may disturb the power balance and stability of the DC ...

A multi-input-port bidirectional DC/DC converter is proposed in this paper for the energy storage systems in DC microgrid. The converter can connect various energy storage ...

The energy storage unit and the microgrid realize bidirectional energy flow; the PV power generation unit provides energy to the microgrid, and the EV charging unit absorbs energy from the microgrid. The object of this paper is the standalone DC microgrid in Fig. 1, and each unit in the microgrid is described next.

Power availability from renewable energy sources (RES) is unpredictable, and must be managed effectively for better utilization. The role that a hybrid energy storage system (HESS) plays is vital in this context. Renewable energy sources along with hybrid energy storage systems can provide better power management in a DC microgrid environment. In this paper, ...

Figure 2. A multi-input-port bidirectional DC/DC converter for energy storage systems in a DC microgrid.  
2.1. Discharging Mode (Boost) In this mode, S 1 and S 2 are interleaved with 180° phase shift to turn on, and Q 1, Q 2 are turned off. During a switching period  $T_s$ , there are three Sub-modes. The main waveforms of the converter

This study proposes a bidirectional DC-DC converter with low voltage stress on its semiconductor elements and high voltage gain. Bidirectional DC-DC converters play a crucial role in DC microgrid systems, and they have been used for many applications such as power flow management, battery storage systems, voltage regulation, and electric vehicle (EV) ...
