To further reduce energy consumption, this current study drew on the concept of NBS (Nature Based Solution) and proposed a low-carbon environmental control system for an enclosed exhibition hall for storage of earthen relics by applying natural energy (solar photovoltaic and earth-air-cooling) and space optimization.

For enclosed exhibition hall without environment control system, its moisture loss rate M loss can be estimated by utilizing Eq. (5). For Scenario-2, the M loss value was 1.65 g/s. In enclosed exhibition hall, the air humidity values were much higher than those of outside zone.
