Underground energy storage and geothermal applications are applicable to closed underground mines. Usually, UPHES and geothermal applications are proposed at closed coal mines, and CAES plants also are analyzed in abandoned salt mines. Geothermal power plants require flooded mines, which generally have closed more than 5 years ago.

In a nowadays world, access energy is considered a necessity for the society along with food and water [1], [2]. Generally speaking, the evolution of human race goes hand-to-hand with the evolution of energy storage and its utilization [3]. Currently, approx. eight billion people are living on the Earth and this number is expected to double by the year 2050 [4].
