SEAC's Storage Snapshot Working Group has put together a document on how to make new construction energy storage-ready and how to make retrofitting energy storage more cost effective. It provides practical suggestions for integrating ESS with conventional electrical services in single-family houses and townhomes.

accordingly set the cooling system (air cooling or liquid cooling) parameters of the BESS. This also creates a difference in the energy consumption by the cooling system to maintain the ideal temperature. The amount of energy consumed by the cooling system matters when the energy is supplied by the BESS (during the discharging and rest period).
