1. Introduction. Concerns about the large contribution of fossil-fuel power plants to carbon emissions have prompted energy planners to gradually base electricity generation on renewables [1]. Distributed photovoltaics (PVs) have recently received increased attention, due to their ease of installation for the residential sector, one of the largest energy consumers [2].

Battery storage systems are being deployed at multiple levels of the electricity value chain, including at the transmission, distribution and consumer levels. According to the Energy Storage Association of North America, market applications are commonly differentiated as: in-front of the meter (FTM) or behind-the-meter (BTM).
