This paper proposes a hybrid algorithm to solve the optimal energy dispatch of an ice storage air-conditioning system. Based on a real air-conditioning system, the data, including the return temperature of chilled water, the supply temperature of chilled water, the return temperature of ice storage water, and the supply temperature of ice storage water, are ...

Air conditioning unit performance, coupled with new configurations of phase change material as thermal energy storage, is investigated in hot climates. During the daytime, the warm exterior air temperature is cooled when flowing over the phase change material structure that was previously solidified by the night ambient air. A theoretical transient model is ...

ACLAB Note On EER Ratings: Portable AC EER ratings on official and marketplace listings are often confusing, as some base them on DOE BTU, while others base them on ASHRAE BTU. ... Higher EER portable air conditioners are more energy-efficient, which can lead to lower electricity bills over time. On average, an increase of 2 EER can save 20 ...

A large share of peak electricity demand in the energy grid is driven by air conditioning, especially in hot climates, set to become a top driver for global energy demand in the next 30 years. The energy-storing capabilities of ice could provide a more efficient, climate ...
