storage ring. A storage ring is a circular accelerator which is widely used as a synchrotron radiation source. After injection, electrons circulate in this ring for several hours at constant energy serving as the source of continuous synchrotron radiation. A storage ring is therefore not a true accelerator although a beam can be ac-

independent of the beam energy. Storage Ring Design 5 Part 2: Emittance and Lattice Design. Calculating the natural emittance in a lattice In most storage rings, if the bends have no quadrupole component, the damping partition number $j_x \approx 1$. In this case we just need to evaluate the two synchrotron radiation
