Step-3 Determining the safe distances based on values of stored energy. As per ASME PCC-2 Mandatory Appendix 501-III the following minimum safe distances shall be maintained depending on value of stored energy and shall be greater of the values calculated based on section 501-III-1(a) and 501-III-1(b):

Pneumatic energy is stored in a compressed gas (usually air) and subsequently converted into mechanical energy when the gas is displaced to a lower pressure environment. Applications of pneumatic energy include the use of jackhammers and mining equipment. Compressed air networks were first used in towns and factories in the 19th century.
