The potential for solar energy to be harnessed as solar power is enormous, since about 200,000 times the world's total daily electric-generating capacity is received by Earth every day in the form of solar energy. Unfortunately, though solar energy itself is free, the high cost of its collection, conversion, and storage still limits its exploitation in many places.

New PV installations grew by 87%, and accounted for 78% of the 576 GW of new renewable capacity added. 21 Even with this growth, solar power accounted for 18.2% of renewable power production, and only 5.5% of global power production in 2023 21, a rise from 4.5% in 2022 22. The U.S.'s average power purchase agreement (PPA) price fell by 88% from 2009 to 2019 at ...

A recent paper by Ferroni and Hopkirk (2016) asserts that the EROEI (also referred to as EROI) of photovoltaic (PV) systems is so low that they actually act as net energy sinks, rather than delivering energy to society. Such claim, if accurate, would call into question many energy investment decisions. In the same paper, a comparison is also drawn between ...
