

As noted from the structural composition and working principle of the aforementioned compressed air ejection device, the valve that controls the gas pipeline of the compressed air ejection device should have stable dynamic characteristics in the high-pressure and large-flow area of the valve port conditions, and the valve should have a short ...

Due to the low temperature and clean gas, liquid CO<sub>2</sub> phase transition ejection technology has outstanding advantages such as high versatility, low launch cost, and environmental friendliness ...

Plastic injection molding is an important device in the plastic manufacturing industry, and understanding the ejection systems used in injection molds can help optimize the production process and improve product quality. Specifically, the ejection system pushes the product out of the mold cavity whenever it cools and solidifies. The ejection mechanism must ...

o Mobile storage trolley o Disconnection/Parking fixture for tongs and jaws o Pneumatic ejection device to replace sealing sleeve o Maintenance toolbox The MA 11-80 is the first remote manipulator made by LaCalhene. It combines flexibility with a considerable average load (7 daN\*). Over one thousand MA 11

A high-pressure pneumatic pilot-driven on/off valve (HPPV) that quickly switches an air inlet line on and off was designed to meet the requirements of a compressed air ejection device with high pressure, high flow rate, and continuous ejection. An HPPV multi-physics field simulation model was established using AMESim simulation software based on the bond graph ...

By establishing a thermodynamic model of a typical CAES system coupled with a fully automatic ejector, the effect of the fully automatic ejector on the system performance is ...

Metal micro-droplet ejection technology has attracted attention for its potential applications in the rapid prototyping of micro-metal parts and microelectronic packaging. The current micro-droplet ejection device developed based on this technology faces challenges such as the requirement of a micro-oxygen ejection environment, a complex feeding structure, and ...

Pneumatic Performance Study of a High Pressure Ejection Device Based on Real Specific Energy and Specific Enthalpy. J. Ren Fengbo Yang D. Ma G. Le Jian-lin Zhong. Engineering, Physics. ... Experimental study on small power generation energy storage device based on pneumatic motor and compressed air. Xu Yonghong Hongguang Zhang +6 authors ...

In this study, the use of a hydro-pneumatic energy storage system is proposed as an interface between the green, fluctuating electricity supply and the electrolyser. ... of hydrogen production observed over the analysed period of one year in spite of a 70% round-trip efficiency of the energy storage device. Export citation and

abstract BibTeX RIS.

4. The ejection device as in claim 1, wherein said piston ( 2 ) is connected to a rope ( 4 ) with which it eject a spear ( 9 ) . 5. The ejection device as in claim 1, wherein said piston ( 2 ) is connected to said rope ( 4 ) which is driven via a fixed pulley ( 6 ) and connected to a free pulley ( 7 ) . 6. The ejection device as in claim 5 ...

As for the study of launching processes for compressed air cold ejection device, some researchers finish lots of related work. Ren[1] et al. have researched the pneumatic performance of a high pressure ejection device based on real specific energy and specific enthalpy, and the pneumatic performance

The invention discloses a pneumatic ejection auxiliary training device, which comprises an air cylinder mechanism, two steering wheels, a braking mechanism, two traction ropes, a pulley, a back pushing support, a resetting mechanism, an energy storage tank and a support, wherein the air cylinder mechanism comprises an air cylinder and a motion piston, the braking mechanism ...

In pneumatic system, power is transmitted and controlled through compressed air within a circuit. Due to its advantages, such as the low price of its components, easy maintenance of the system, pneumatic system has been widely used throughout industries [1,2,3]. And now, pneumatic system has become a main energy consumption system all over the world [4, 5].

This paper proposes an approach to evaluate the pneumatic performance of a high-pressure air catapult launch system, in which residual functions are used to compensate the thermal physical property uncertainties of caused by real gas effects.

This paper proposes an approach to calculate the specific thermodynamic energy and specific enthalpy of real gas. In the high-pressure air pneumatic system, the thermodynamic properties of the air ...

The pneumatic drives are simple cheap but very low efficient [6] and when used in transportation often with limited range [16] because of low energy density [1,7] in pneumatic energy container used to feed the pneumatic engine [[21], [22], [23]]. Additional the problem here lays in gas decompression process which occurs in pneumatic engine.

Catapult launching can effectively reduce the energy consumption of UAVs in the take-off stage, increase the payload, and improve cruising mileage. This study investigated the compressed ...

The gas ejection system provides initial kinetic energy for the aircraft, which determines the launch ability and affects the maneuverability. In this paper, an overall energy analysis model of ejection system was built and a new structure optimization method based on exergy efficiency maximization was developed.

The pneumatic Strain Energy Accumulator is a recently developed device that recycles exhaust gas from one

pneumatic component, stores it in a highly efficient process, ...

Ren [1] et al. have researched the pneumatic performance of a high pressure ejection device based on real specific energy and specific enthalpy, and the pneumatic performance analysis indicates ...

FLASC is developing an energy storage technology tailored for offshore applications. The solution is primarily intended for short- to medium-term energy storage in order to convert an intermittent source of renewable power into a smooth and predictable supply. The technology is based on a hydro-pneumatic liquid piston concept, whereby electricity is stored by using it [...]

In this paper, we study the interior ballistic characteristics of rockets or missiles with acceleration less than 10 g during the compressed air ejection process. First, we designed and fabricated a full-size compressed air ejection system, and utilizing different missile mass and initial pressure variables. Then, we established the mathematical model of the interior ballistics ...

A stores ejection system for retaining stores on the underside of an aircraft and forcibly jettisoning the stores away from the aircraft is disclosed. The ejection system includes a plurality of ejector mechanisms for releasably holding and jettisoning the stores away from the aircraft, a plurality of storage devices for storing pressurized gas to actuate the ejector mechanisms, and a central ...

Compared with traditional isochoric storage of compressed air in pneumatic systems, isobaric storage possesses many advantages. In this study, a novel isobaric compressed air storage device is ...

Experimental study on small power generation energy storage device based on pneumatic motor and compressed air. *Energy Convers. Manag.*, 234 ... Pneumatic performance study of a high pressure ejection device based on real specific energy and specific enthalpy. *Entropy*, 16 (2014), pp. 4801-4817, 10.3390/e16094801. View in Scopus Google Scholar [29]

In the high-pressure pneumatic thermodynamic process, the pressure is much larger than the critical pressure, and the temperature deviates from the Boyle temperature seriously, the thermodynamic parameters are not authenticity under ideal gas assumption, so pneumatic performance of the quality can not be guaranteed. In view of this, the pneumatic equations are ...

*Energy Storage Science and Technology* >> 2023, Vol. 12 >> Issue (6): 1831-1839. doi: 10.19799/j.cnki.2095-4239.2022.0743 o Energy Storage System and Engineering o Previous Articles Next Articles . Experimental and simulation study of a compressed air ejection system

The energy devices for generation, conversion, and storage of electricity are widely used across diverse aspects of human life and various industry. Three-dimensional (3D) printing has emerged as ...

Eaton's pneumatic ejection valves provide the energy to rapidly unlock weapon release linkages and extend ejector pistons of weapon release systems on military bomb racks and carriages. Our valves feature cold gas deployment using nitrogen or compressed air and can integrate with cold gas stored in attached pressure vessels or supplied from onboard compressors.

The sewage ejection function is initiated by a float which ascends when the fluid level in the tank rises to a certain level. The ejector is designed to operate with a one-minute cycle consisting of two phases, i.e. filling the tank and discharging the contents. ... This ensures that the overall energy efficiency of the whole system is higher ...

By introducing isobaric compressed air storage devices in pneumatic systems, notable energy-saving performance can be achieved even with the simple on-off control. In this study, when the rated working pressure is set to 0.4 MPa, about 18% of ...
