Description. This projection welding machine are vertical motion type pressurizing mechanisms. Due to the compressibility of the air, the follow-up of the pneumatic welder is superior to that of the hydraulic welder, and the pneumatic system can be used for the vertical motion welder of all powers, so the projection welding machine mostly uses a pneumatic system.

The Stored Energy welding power supply - commonly called a Capacitive Discharge Welder or CD Welder - extracts energy from the power line over a period of time and stores it in welding capacitors. Thus, the effective weld energy is independent of line voltage fluctuations. This stored energy is rapidly discharged through a pulse transformer producing a flow of electrical current ...

The outstanding features of the energy storage spot projection welding machine are short discharge time and large instantaneous current, so the thermal effects such as deformation and discoloration after welding are
