The energy is stored in the solid-to-liquid phase change and is released as the blocks cool and the particles become solid again. MGA Blocks are used in Thermal Energy Storage Systems (TESS) which deliver continuous high temperature heat or electricity that is safe, low cost, sustainable and high capacity.

The system can simultaneously charge and discharge, enabling a continuous 24/7 discharge of renewable energy. Varied discharge-to-charge ratios allow asset operators to charge while the price is low, during times of high renewable energy generation and discharge when the price is high or during times of low energy production (i.e. arbitrage).
