It refers to how much energy the battery holds. Most household batteries range from 800 to 2,500 mAh. ... so it still might make sense to buy some high-capacity NiMH LSD batteries, too. Beware of Overheating and Overcharging. ... Li-ion batteries also have specific storage requirements. They need to be at approximately 40% charge when stored.

Many people think that the former should be used, but the author believes that battery storage is more reasonable cause: According to the test, the best condition for the storage of NiMH batteries is to save about 80% of the charge. This is because the self-discharge of Ni-MH batteries is large (about 10%-15% in one month).

Table 3: Advantages and limitations of NiMH batteries. Nickel-iron (NiFe) After inventing nickel-cadmium in 1899, Sweden's Waldemar Jungner tried to substitute cadmium for iron to save money; however, poor charge efficiency and gassing (hydrogen formation) prompted him to abandon the development without securing a patent.. In 1901, Thomas Edison ...
