The cool storage systems help not only to reduce the installed cooling power, but also the refrigeration system capacity and size for air-cooled or water-cooled chillers. Consequently, the limited capacity and size of refrigeration towers or dry coolers can significantly reduce the environmental impact (noise and local warming).

Illustration of an ice storage air conditioning unit in production. Ice storage air conditioning is the process of using ice for thermal energy storage. The process can reduce energy used for cooling during times of peak electrical demand. [1] Alternative power sources such as solar can also use the technology to store energy for later use. [1] This is practical because of water's large heat ...
