1. Introduction. With energy strategy reform of the world, there is a rapid increase of wind and solar power integrated to the power grid in recent years, which has caused big issues in frequency control and power network stability, such as enlarged peak-valley demand gap and insufficient system peak demand regulation capacity.

Intermittent renewable energy is becoming increasingly popular, as storing stationary and mobile energy remains a critical focus of attention. Although electricity cannot be stored on any scale, it can be converted to other kinds of energies that can be stored and then reconverted to electricity on demand. Such energy storage systems can be based on batteries, ...
