In power industry, the safety issue is always of great importance. As the first hydrogen based project in China power sector, the safety level of platform had drawn great attention during the project. However, there are few standards to follow regarding safety analysis for hydrogen energy storage system in power industry.

This paper provided a comprehensive review on applications of hydrogen in the transport and energy sector, its storage and transmission, and safety aspects of hydrogen handling with a special focus on CFD modelling as a suitable method for predicting hazardous scenarios in hydrogen applications.

The EESS is composed of battery, converter and control system. In order to meet the demand for large capacity, energy storage power stations use a large number of single batteries in series or in parallel, which makes it easy to cause thermal runaway of batteries, which poses a serious threat to the safety of energy storage power stations.
