This thesis seeks to examine the effective convective heat exchange of sand as a heat exchange medium. The goal of this exploratory research is to quantify the heat transfer coefficient of sand in a proposed Thermal Energy Storage (TES) system which intends to complement solar thermal power generation. Standard concentrator solar thermal power plants typically employ a heat ...

The basic idea behind energy storage is to transform one form of energy into another that can be done in an efficient, cost-effective, and hopefully emission-minimizing method [6]. Energy storage allows demand and supply to be de-coupled through time, reducing reliance on plants that may be over-designed, inefficient, and expensive [7].

In view of this, the United States has invested \$2.4 million in the Sand Tesla Energy Storage (SandTES) pilot design project, which aims to integrate a 10 MWh thermal energy storage system using sand as the storage medium. This initiative supports the Biden-Harris administration's goal of a fully decarbonised electricity grid by 2030 [66].
