How does a capacitor store energy? Energy in Electric Field . The energy stored in a capacitor can be calculated using the formula  $E = 0.5 * C * V^2$ , where  $E$  is the stored energy,  $C$  is the capacitance, and  $V$  is the voltage across the capacitor. To convert the stored energy in a capacitor to watt-hours, divide the energy (in joules) by 3600.
