As a new paradigm of energy storage industry under the sharing economy, shared energy storage (SES) can effectively improve the comprehensive regulation ability and safety of the new energy power system. However, due to its unclear business positioning and profit model, it restricts the further improvement of the SES market and the in-depth exploration ...

Shared energy storage has the potential to decrease the expenditure and operational costs of conventional energy storage devices. However, studies on shared energy storage configurations have primarily focused on the peer-to-peer competitive game relation among agents, neglecting the impact of network topology, power loss, and other practical ...

Shared energy storage systems (SESS) have been gradually developed and applied to distribution networks (DN). There are electrical connections between SESSs and multiple DN nodes; SESSs could significantly improve the power restoration potential and reduce the power interruption cost during fault periods. Currently, a major challenge exists in terms of ...

Considering the renewable energy uncertainty, an optimization model is proposed based on the chance-constrained goal programming (CCGP). Finally, simulation results prove that the proposed energy storage business model has a positive effect on improving the economic benefits of the DCC.

At present, with the continuous technical and economic improvement of the energy storage, the large-scale application of energy storage is possible. However, the current ...

We propose to characterize a "business model" for storage by three parameters: the application of a storage facility, the market role of a potential investor, and the revenue stream obtained from its operation (Massa et al., 2017). An application represents the activity that an energy storage facility would perform to address a particular need for storing ...

Shared battery energy storage has the potential to be a solution for the commercialization of grid scale battery energy storage, as it can overcome challenges faced by traditional battery energy ...

The sharing economy brings in new business models for energy storage [56, 57], among which a representative is cloud storage [58]. Indeed, energy storage is commonly co-shared with PVs [38, 39, 60], resting on methods such as adaptive bidding [59]. Apart from scheduling, the sizes of batteries were also optimised [61].

In this context, shared energy storage (SES), a novel business model combined with energy storage technologies and the sharing economy, has the potential to play an important role in renewable ...
