

The concept of "shared energy storage" has been proposed by scholars at home and abroad to reduce the construction costs and enhance utilization (Dai et al., 2021, Asri et al., 2023). Current research on shared energy storage focuses on addressing transactional issues between energy storage operators and users, especially on the distribution network side ...

With the increasing penetration of wind power into the grid, its intermittent and fluctuating characteristics pose a challenge to the frequency stability of grids. Energy storage systems (ESSs) are beginning to be used to assist wind farms (WFs) in providing frequency support due to their reliability and fast response performance. However, the current schemes ...

Due to the flexibility of the energy storage sharing mode, a two-part price-based leasing mechanism of shared energy storage (SES) considering market prices and battery degradation is proposed to provide the short-term use rights of energy storage for the VPP in a new pattern. ... the pressures of frequency regulation and peak shaving in power ...

Peak regulation means that in order to alleviate the situation that the load rate of the generator set is lower than the prescribed range during the period of low load or the lack of positive reserve during the peak period, the power grid side energy storage accepts the dispatching instruction. the service provided by increasing or reducing ...

In contrast, for a budget of uncertainty of 10, these values are 100 % and 0 %, respectively. Thus, increasing the budget of uncertainty raises the participation level of shared battery energy storage in up-regulation services in the charging mode. It's ...

The results show that the shared energy storage can jointly meet the regulation demand of multi-scenarios by coordinating the transferable load and cuttable load in the microgrid and improving the ...

Shared energy storage operator needs to design reasonable capacity to maximise their profits. Virtual power plant operator also divides the required capacity and charging and discharging power of each VPP, according to the rated capacity given by the SESS, and adjusts the output of the internal equipment.

For the study of shared energy storage, the main purpose is to optimize the configuration of shared energy storage capacity and compare the shared mode with the independent energy storage mode. Luthander et al. used battery and solar PV simulation models to evaluate solar and economic metrics for individual and shared energy storage scenarios [23].

To constrain the capacity power of the distributed shared energy storage, the big-M method is employed by multiplying  $U_{e s s, i p o s}(t)$  by a sufficiently large integer  $M$ . (5)  $P_{e s s, i m i n} \leq U_{e s s, i p o s} \leq P_{e s s, i m a x}$

$x \leq M U_{e s s, i p o s} E_{e s s} \min U_{e s s, i p o s} \leq E_{e s s, i m a x} \leq M U_{e s s, i p o s}$

A multi-agent model for distributed shared energy storage services is proposed. A tri-level model is designed for optimizing shared energy storage allocation. A hybrid solution combining analytical and heuristic methods is developed. A comparative analysis reveals shared energy storage's features and advantages.

With the large-scale access of renewable energy, the randomness, fluctuation and intermittency of renewable energy have great influence on the stable operation of a power system. Energy storage is considered to be an important flexible resource to enhance the flexibility of the power grid, absorb a high proportion of new energy and satisfy the dynamic ...

The results indicate that the multi-agent shared energy storage mode offers the most flexible scheduling, the lowest configuration cost among all distributed energy storage ...

The allocation options of energy storage include private energy storage and three options of community energy storage: random, diverse, and homogeneous allocation. With various load options of appliances, photovoltaic generation and energy storage set-ups, the operational cost of electricity for the households is minimized to provide the ...

In response to poor economic efficiency caused by the single service mode of energy storage stations, a double-level dynamic game optimization method for shared energy storage systems in multiple application scenarios considering economic efficiency is proposed in this paper. By analyzing the needs of multiple stakeholders involved in grid auxiliary services, ...

Virtual power plants (VPPs) provide energy balance, frequency regulation, and new energy consumption services for the power grid by integrating multiple types of flexible resources, such as energy storage and ...

Although the "shared energy storage" mode has been proposed, the "shared hydrogen storage" involving multiple links is not mature. ... can reduce total operating costs by facilitating renewable energy scheduling and shifting peak load demand to shutdown [17]. Taking a comprehensive building as an example, Nastasi Benedetto et al ...

The emergence of the shared energy storage mode provides a solution for promoting renewable energy utilization. However, how establishing a multi-agent optimal operation model in dealing with ...

As far as existing theoretical studies are concerned, studies on the single application of BESS in grid peak regulation [8] or frequency regulation [9] are relatively mature. The use of BESS to achieve energy balancing can reduce the peak-to-valley load difference and effectively relieve the peak regulation pressure of the grid [10].Lai et al. [11] proposed a method ...

A survey by the International Energy Agency (IEA) shows that the share of renewable energy in the electricity generation mix reached 30 % in 2021, with solar photovoltaic (PV) and wind power generation realizing an increase of about 18 % [1]. With the reduction in the cost of renewable energy systems and policy incentives, an increasing number of community users are installing ...

Techno-economic assessment and mechanism discussion of a cogeneration shared energy storage system utilizing solid-state thermal storage: A case study in China ... The molten salt cogeneration shared energy storage uses electric heating mode to convert electric energy into heat energy stored in the molten salt tank. ... Peak regulation is the ...

a master-slave sharing model between the shared energy storage system (SESS) and multiple producers was applied to achieve win-win benefits for shared energy storage and consumers [24]. Moreover, the organic combination of energy storage technology and shared ideas has promoted the development of shared energy storage. The definition of cloud

This paper proposes a framework for using a shared battery energy storage system (BESS) to undertake the PFR obligations for multiple wind and photovoltaic (PV) power plants and ...

During the peak load period of 18:00 to 00:00, the backup capacity of energy storage devices gradually declines. However, as they continue to discharge and transfer to standby mode, the backup power steadily increases and remains at a high level. ... The DNO energy storage provides only regulation services for the distribution network, while ...

Currently, to handle the uncertainty of high-permeability systems of RE, the use of ES combined with conventional units to enhance the system's multi-timescale regulation capability has become a hot topic [27, 28] Ref. [29], to optimize the ES dispatch, an optimal control strategy for ES peak shaving, considering the load state, was developed according to ...

However, in Scenario 2, the system uses shared energy storage to charge the shared energy storage during off-peak periods, increasing the electricity consumption during off-peak periods by 6.09 %; while during peak periods, the system uses shared energy storage to discharge, so that the peak period consumption. The power is reduced by 4.46 %.

This paper investigated a shared energy storage sizing strategy for various renewable resource-based power generators in distribution networks. The designed shared energy storage-included hybrid power generation system was centrally operated by an integrated system operator.

2 Microgrid with shared energy storage and controllable load 2.1 The operation mode of shared energy storage. The proposed centralized shared energy storage operation mode is described as follows: the power supply, energy storage, and load are combined to build a system architecture including a microgrid, shared

energy storage, and power grid ...

Annual number of operation days for energy storage participating in frequency modulation  $N_f$  (day) 300:  
Annual number of operation days for energy storage participating in peak regulation  $N_p$  (day) 300: Mileage settlement price  $l_1$  (Yuan) 14: Charge efficiency  $i_c$  (%) 95: Discharge efficiency  $i_d$  (%) 95: The maximum physical SOC: 0.8: The ...

Pratyush Chakraborty and Li Xianshan et al. introduced an optimization model with the goal of minimizing shared energy storage costs, achieving optimal objectives for ...

Li, L. et al. Optimal economic scheduling of industrial customers on the basis of sharing energy-storage station. *Electric Power Construct.* 41 (5), 100-107 (2020). Nikoobakht, A. et al. Assessing increased flexibility of energy storage and demand response to accommodate a high penetration of renewable energy sources. *IEEE Trans. Sustain.*
