Energy costs of an optimized integrated home with a PV BESS and power-to-heat coupling in comparison to a household with conventional energy supply. The costs of the two different scenarios, presented in Table 7 in combination with the results presented in Section 3.3, lead to the following conclusions: An optimization of component sizes is ...

Distributed photovoltaic generation and energy storage systems: ... This work presents a review of energy storage and redistribution associated with photovoltaic energy, proposing a distributed micro-generation complex connected to the electrical power grid using energy storage systems, with an emphasis placed on the use of NaS batteries.

The increase in the proportion of renewable energy in a new power system requires supporting the construction of energy storage to provide support for a safe and stable power supply. In this paper, the computable general equilibrium (CGE) quantitative assessment model is used coupled with a carbon emission module to ...
