In this paper, we examine integrated thermal energy storage (TES) solutions for a domestic-scale solar combined heat and power (S-CHP) system based on an organic Rankine cycle (ORC) engine and low-cost non-concentrating solar-thermal collectors. TES is a critical element and distinct advantage of solar-thermal systems.

The two main TES technologies in the Danish district heating sector are water tank thermal energy storage (TTES) systems and water pit thermal energy storage (PTES) systems. While TTES is a well-known technology, PTES is a relatively new technology, with the first large-scale system starting operation in 2012.
