

In recent years, (Pb, La) (Zr, Sn, Ti)O₃ (PLZST) antiferroelectric ceramics have attracted many attentions as energy storage materials. The tetragonal phase PLZST ceramics ...

Two-dimensional (2D) monolayers are promising in electrochemical energy storages (EES), while their performance is still far below than that can be exploited. Understanding 2D monolayers, particularly thin nanocrystals (NCs) with and without surface modifications in EES would be interesting. This work demonstrates how monolayered molybdenum sulfide (Mo-S) NCs with S ...

Coupled and decoupled hierarchical carbon nanomaterials toward high-energy-density quasi-solid-state Na-Ion hybrid energy storage devices Yiju Li, Yong Yang, Jinhui Zhou, Shuangyan Lin, ... Shaojun Guo

Dielectric capacitors own great potential in next-generation energy storage devices for their fast charge-discharge time, while low energy storage capacity limits their commercialization. Enormous lead-free ferroelectric ceramic capacitor systems have been reported in recent decades, and energy storage density has increased rapidly.

The advanced battery technologies beyond Li-ion have been intensively studied for higher energy density and overall performance, such as Li-S, Li-air, and solid-state Li-metal systems [[1], [2], [3]]. Among them, metallic Li is the anode of choice for the next generation batteries because of its extremely high theoretical capacity of 3860 mAh g⁻¹ and low redox ...

Herein, guided by all-scale synergistic design, we fabricated Sr_{0.7} Bi_{0.2} TiO₃ ceramics doped with (Bi_{0.5} Na_{0.5})(Zr_{0.5} Ti_{0.5})O₃ by sintering the nanopowders by solution ...

Caffeine as an energy storage material for next-generation lithium batteries. Wontae Lee, Yeongjin Lee, Hyunyoung Park, Munhyeok Choi, ... Won-Sub Yoon. Pages 13-24 View PDF. Article preview.

All-solid-state Li-S batteries (ASSLSBs) have exhibited great promise as next-generation energy storage systems due to the elimination of the shuttle effect and flammability. However, the low reactivity of sulfur and poor solid-solid contact in the composite cathode result in limited electrochemical performances.

In response to the requirements for energy storage technologies, solid-state lithium batteries (SSLBs) with solid-state electrolytes (SSEs) coupled with lithium (Li) metal anode have obtained great attention for their high safety and much enhanced energy density [1, 2] pared with traditional lithium-ion batteries (LIBs), SSLBs can effectively avoid the ...

The study presents an experimental investigation of a thermal energy storage vessel for load-shifting purposes. The new heat storage vessel is a plate-type heat exchanger unit with water as the ...

At room temperature, the composite film with 5 vol% two-dimensional (2D) SrTiO plates achieves an outstanding energy storage density of 19.46 J cm and an ultra-high energy storage ...

The 3 rd ISRET brought together top scientists to discuss the latest advances in functional materials for sustainable energy conversion and storage technologies with the aim to promote international cooperation and partnership between world leaders in the fields of nanomaterials for clean energy applications. A total of 106 impressive oral ...

Biography Zhong Lin Wang received the Ph.D. degree in physics from Arizona State University, Tempe, AZ, USA, in 1987. He is currently the Hightower Chair in materials science and engineering, Regents" Professor, Engineering Distinguished Professor, and Director with the Center for Nanostructure Characterization, Georgia Tech, Atlanta, GA, USA.

Fig. 2 shows the XRD patterns of ceramics sintered at each optimal sintering temperature. In Fig. 2 a, all the ceramic samples demonstrate a typical perovskite structure compared with the standard PDF card 29-0776 in the range of 10-90°. A small pyrochlore phase was found in the samples, which may be ascribed to the inevitable absence of lead during high ...

Polymer dielectrics with a high energy density and an available energy storage capacity have been playing an important role in advanced electronics and power systems. Nevertheless, the use of polymer dielectrics in harsh environments is limited by their low energy density at high temperatures. Herein, zirconium dioxide (ZrO₂) nanoparticles were decorated ...

Multifunctional energy devices with various energy forms in different operation modes are under current research focus toward the new-generation smart and self-powered electronics. In this review, the recent progress made in developing integrated/joint multifunctional energy devices, with a focus on electrochromic batteries/supercapacitors, and ...

Improving the thermal performance of building envelope is an important way to save building energy consumption. The phase change energy storage building envelope is helpful to effective use of renewable energy, reducing building operational energy consumption, increasing building thermal comfort, and reducing environment pollution and greenhouse gas ...

Among various inorganic dielectrics, perovskite relaxor ferroelectrics are recognized as promising candidates for energy storage applications, with high permittivity and relatively high efficiency.

DOI: 10.1016/j.nanoen.2024.109524 Corpus ID: 268764611; Crystallographic types depended energy storage mechanism for zinc storage @article{Zhu2024CrystallographicTD, title={Crystallographic types depended energy storage mechanism for zinc storage}, author={Yirong Zhu and Wenping Zhong and Wenhao Chen and Zhongliang Hu and Yujia Xie ...

Zinc-air batteries deliver great potential as emerging energy storage systems but suffer from sluggish kinetics of the cathode oxygen redox reactions that render ...

Although a large amount of KNN-based ceramics with high recoverable energy storage density (W_{rec}) have been designed for energy storage applications, the relatively low energy storage ...

Ultimately, the 0.7PBLZST-0.3PLZST composite ceramics exhibit superior energy storage performance with a high W_{rec} of 9.8 J cm^{-3} and a high energy efficiency (?) of 87.5%. ...

A bi-functional WO_3 -based anode enables both energy storage and conversion in an intermediate-temperature fuel cell. Dai Dang, Bote Zhao, Dongchang Chen, Ben M. deGlee, ... Meilin Liu. Pages 79-84 View PDF. Article preview. select article Molecular insights into ether-based electrolytes for Li-FeS₂ batteries.

The energy barrier of pristine Li_2S is as high as 3.4 eV per chemical formula, while the energy barrier of $\text{Li}_2\text{S}@NC:\text{SAFe}$ is merely 0.81 eV (Fig. 1 C). The result indicates that the highly active SAFe could dramatically decrease the energy barriers for delithiation of Li_2S and facilitate the transport of Li ion in the electrode (Table S1).

Aqueous Zinc-Iodine Batteries: From Electrochemistry to Energy Storage Mechanism. Hui Chen, Hui Chen. Key Laboratory of the Ministry of Education for Advanced Catalysis Materials, Department of Chemistry, Zhejiang Normal University, Jinhua, 321004 China. Search for more papers by this author.

Dielectric ceramic capacitors, with the advantages of high power density, fast charge-discharge capability, excellent fatigue endurance, and good high temperature stability, have been acknowledged to be promising candidates for solid-state pulse power systems. This review investigates the energy storage performances of linear dielectric, relaxor ferroelectric, ...
