Focus. This chapter explains and discusses present issues and future prospects of batteries and supercapacitors for electrical energy storage. Materials aspects are the central focus of a consideration of the basic science behind these devices, the principal types of devices, and their major components (electrodes, electrolyte, separator).

Batteries are perhaps the most prevalent and oldest forms of energy storage technology in human history. 4 Nonetheless, it was not until 1749 that the term "battery" was coined by Benjamin Franklin to describe several capacitors (known as Leyden jars, after the town in which it was discovered), connected in series. The term "battery" was presumably chosen ...
