

# This year's energy storage installed capacity

In 2023, the United States set a record for the most clean energy installed in a single year, with 33.8 gigawatts (GW) installed - over three-fourths of all new electricity ...

The U.S. energy storage market set a first-quarter record for capacity installed in Q1 2024, with 1,265 megawatts (MW) deployed across all segments. This marks the highest storage capacity ever installed in a first quarter in the U.S., representing an 84% increase from Q1 2023.

GW = gigawatts; PV = photovoltaics; STEPS = Stated Policies Scenario; NZE = Net Zero Emissions by 2050 Scenario. Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolyzers are not included.

The U.S. energy storage market set a first-quarter record for capacity installed in Q1 2024, with 1,265 megawatts (MW) deployed across all segments. This marks the highest ...

Developers commissioned 33 energy storage projects across 10 states in Q2 2024, ACP said in its report. California added the most capacity of any state, with 1,353 MW/5,397 MWh of newly energized battery storage, and accounts for 46% of installed U.S. storage capacity, ACP said.

We expect U.S. battery storage capacity to nearly double in 2024 as developers report plans to add 14.3 GW of battery storage to the existing 15.5 GW this year. In 2023, 6.4 ...

This audio is auto-generated. Please let us know if you have feedback The U.S. energy storage sector marked its second strongest quarter on record in Q2 2024 with 2.9 GW of newly installed capacity, a 62% jump from Q2 2023, the American Clean Power Association said Thursday in its latest clean power quarterly market report.

According to Wood Mackenzie and the American Clean Power Association's (ACP) newly released US Energy Storage Monitor report, the grid-scale segment installed 993 MW, producing the highest Q1 on record for the grid-scale segment. Nevada, California, and Texas accounted for 90% of new grid-scale capacity added.

In the first half of 2023, the United States saw significant growth in its utility energy storage capacity and reserves: According to S&P Global's forecast, the new installed capacity of U.S. utility energy storage (battery storage) is projected to reach 3.50GW in Q3 2023, marking an 81% increase compared to the previous quarter.

September set a record for the most newly commissioned battery. As a result, commercially operational battery energy storage capacity in ERCOT now stands at 6.4 GW. This is up 60% from just over 4

## This year s energy storage installed capacity

GW at the beginning of the ...
