Downstream Uzbekistan, Turkmenistan and Kazakhstan, in contrast, have far less internal renewable water resources and rely on the water from transboundary rivers to be released primarily in summer to meet their irrigation needs and avoid uncontrolled winter flooding .

Power of Siberia 2, Russia's long-in-development pipeline designed to send additional gas to China, has taken on a new importance in the past year because of Moscow's collapsing energy relationship with Europe. The proposed route for the Soyuz-Vostok portion of the pipeline would run from Irkutsk, across Mongolia and onwards to Beijing.

Hydrogen energy has been widely used in large-scale industrial production due to its clean, efficient and easy scale characteristics. In 2005, the Government of Iceland proposed a fully self-sufficient hydrogen energy transition in 2050 [3] 2006, China included hydrogen energy technology in the "China medium and long-term science and technology development ...

The storage material's capacity to store heat energy is directly proportional to the specific heat (C_p), volume, density, and the change in temperature of the material used for storage. Storage materials used for the sensible heat method can be classified on their physical state: liquid or solids [8] .

Furthermore, DOE's Energy Storage Grand Challenge (ESGC) Roadmap announced in December 2020 11 recommends two main cost and performance targets for 2030, namely, \$0.05(kWh) -1 levelized cost of stationary storage for long duration, which is considered critical to expedite commercial deployment of technologies for grid storage, and a ...
