Oregon) have established energy storage targets or mandates. California adopted the first energy storage mandate in the USA when, in 2013, the California Public Utilities Commission set an energy storage procurement target of 1.325 GW by 2020. Since then, energy storage targets, mandates, and goals have been established in Massachusetts,

Energy storage growth is generally driven by economics, incentives, and versatility. The third driver--versatility--is reflected in energy storage's growing variety of roles across the electric grid (figure 1).

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application

It highlights key trends for battery energy storage supply chains and provides a 10-year demand, supply and market value forecast for battery energy storage systems, individual battery cells and battery cell subcomponents (including cathode, anode, electrolyte and separators).

Energy storage is the key to facilitating the development of smart electric grids and renewable energy (Kaldellis and Zafirakis, 2007; Zame et al., 2018). Electric demand is unstable during the day, which requires the continuous operation of power plants to meet the minimum demand (Dell and Rand, 2001; Ibrahim et al., 2008). Some large plants like thermal ...
