

This paper describes a methodology for designing hybrid energy storage systems for urban railway applications integrating lithium batteries and supercapacitors and the effectiveness of the hybrid ESS is shown on a real case study presenting catenary-less zones. Currently, lithium batteries are characterized by higher energy density but they require an ...

Sizing and energy management of on-board hybrid energy storage systems in urban rail transit Abstract: Currently, lithium batteries are characterized by higher energy density but they require an accurate charge and discharge profile to increase its lifetime, and it is not easily to be obtained feeding urban railway systems. On the other hand ...

The fourth section applies the IMODE algorithm to configure the capacity of the urban rail photovoltaic-hybrid energy storage system, with specific optimization objectives outlined in Section 4.2. Finally, the conclusion and limitations of the study, as well as future research directions, are discussed in Section 5. 2.

In this paper, a novel architecture of urban rail transit based on hybrid energy storage system (H-ESS) is proposed. Supercapacitor (SC) and UPS are used to smooth the pulse power of the ...

Energy management is an important link in the effective functioning of hybrid energy storage systems (HESS) within urban rail trains. This factor significantly impacts the ...

Onboard energy storage in rail transport: Review of real applications and techno-economic assessments. ... supercapacitors (SCs), and flywheels in urban rail systems. Particular detail is given to the analysis of standard techniques for the energy control of onboard supercapacitors. ... The BEC-819 train is an AC catenary/battery hybrid train ...

Access scheme of on-board energy storage3.1.1. Urban rail DC drive locomotive. ... Through AC-DC-AC conversion, the regenerative braking energy of the train is transferred to the 10 kV distribution system load, which can further improve the utilization rate and maintain the load power balance. ... [53] proposed a multi-mode hybrid energy ...

In this paper, a power allocation strategy based on optimal temperature tracking is proposed for the contactless urban rail hybrid energy storage system. First, the maximum power is limited by the charge and discharge capacity factors to prevent overcharging and discharging of system. Second, a power allocation method based on optimal temperature tracking under minimum ...

DOI: 10.1016/j.energy.2022.123263 Corpus ID: 246202306; Power dynamic allocation strategy for urban rail hybrid energy storage system based on iterative learning control @article{Wang2022PowerDA, title={Power dynamic allocation strategy for urban rail hybrid energy storage system based on iterative learning control},

author={Xin Wang and Yingying ...

The introduction of flywheel energy storage systems (FESS) in the urban rail transit power supply systems can effectively recover the train's regenerative braking energy and stabilize the catenary voltage. Due to the ...

Due to the short distance between stations, frequent acceleration and braking for urban rail trains cause voltage fluctuation in the traction network and the regenerative braking energy loss. In this study, a hybrid energy storage system (HESS) was proposed to recover braking energy and stabilize the traction network voltage, where the on-board

DOI: 10.19799/J.CNKI.2095-4239.2019.0206 Corpus ID: 226437852; Energy management strategy of hybrid energy storage system for urban rail trains @article{Zhang2020EnergyMS, title={Energy management strategy of hybrid energy storage system for urban rail trains}, author={Baoge Zhang and Ping Li and Zhen Zhang and Wang Yu and Yao Rong}, ...

References [17, 18] optimized the volume and energy consumption of the on-board ESS of EMU. Hybrid electric trains have good application prospects in intercity lines, snowstorm or freezing rain weather-prone areas. AC-DC-AC locomotives are mostly used in AC electrified railways.

A single-objective optimization energy management strategy (EMS) for an onboard hybrid energy storage system (HESS) for light rail (LR) vehicles is proposed. The HESS uses batteries and supercapacitors (SCs). The main objective of the proposed optimization is to reduce the battery and SC losses while maintaining the SC state of charge (SOC) within ...

This paper describes a methodology for designing hybrid energy storage systems (ESS) for urban railway applications integrating lithium batteries and supercapacitors. The sizing procedure ...

With the rapid development of urban rail transit, installing multiple sets of ground energy storage devices on a line can help reduce train operation energy consumption and solve the problem of regeneration failure. In this paper, through typical operating scenarios of two energy storage systems and a single train, the impact of the no-load voltage difference of the substation on the ...

A hybrid energy storage system comprising a supercapacitor and battery, which can satisfy the high energy and power requirements of urban rail trains and maintain the voltage stability of the DC traction network to ensure its safe operation, is proposed. ... ZHANG Baoge, LI Ping, ZHANG Zhen, WANG Yu, RONG Yao. Energy management strategy of ...

At present, the urban rail train mainly adopts traction power supply network to supply power, and the investment cost of traction network construction is high [1, 2]. The uncontrolled rectifier technology is usually used for power supply of traction substation, which makes the train unable to feed the regenerative braking

energy to the power grid through the ...

With the rapid expansion of urban rail transit, energy demand is continuously increasing. Integrating photovoltaic (PV) systems into hybrid energy storage systems (HESS) to form a rail transit PV hybrid energy storage system (RTPHESS) is an effective energy-saving and emission reduction measure.

In order to effectively recover and utilize the regenerative energy of urban rail trains, in recent years, a variety of regenerative braking energy utilization methods have attracted wide attention from scholars at home and abroad, including flywheel energy storage, energy feed device and supercapacitor energy storage.

The robust train timetable optimization problem seeks to minimize the passenger waiting time and train energy consuming in urban rail transit systems. The two objectives are always contradictory, and reducing the total passenger waiting time always lead to the increasing of the train energy saving, which are illustrated in Fig. 8 and Table 6 ...

There are currently three feasible options for integrating PV systems into the urban rail power supply: (1)the 35 kV AC side, (2)the DC side, and (3)the 400 V low voltage side. In this paper, we employed the RTPHESS power structure to model the integration of PV systems into the DC side of urban rail power supply systems.

In urban rail transit, hybrid energy storage system (HESS) is often designed to achieve "peak shaving and valley filling" and smooth out DC traction network power fluctuation. In this paper, a variable gain K iterative learning control (K-ILC) is proposed to balance the DC regulated voltage characteristics and the optimal lifetime of the battery storage system in the ...

In urban rail transit, hybrid energy storage system (HESS) is often designed to achieve "peak shaving and valley filling" and smooth out DC traction network power fluctuation.

Due to the short distance between stations, frequent acceleration and braking for urban rail trains cause voltage fluctuation in the traction network and the regenerative braking energy loss. In this study, a hybrid energy storage system (HESS) was proposed to recover braking energy and stabilize the traction network voltage, where the on-board ultracapacitors ...

Hybrid energy management strategy based on dynamic setting and coordinated control for urban rail train with PMSM. May 2021; IET Renewable Power Generation 15(2 ... a hybrid energy storage system ...

In this paper, IMODE algorithm is used to optimize the capacity configuration of urban rail PV hybrid energy storage system, and finally, the economy and voltage regulation ...

In recent years, the introduction of Energy Storage System (ESS) into rail transit has increased the ratio of regenerative energy recovery. However, the investment of energy storage devices and ratio of energy saving varies due to different types of ESS. To overcome the problem, hybrid energy storage system (HESS) is an

Urban rail train hybrid energy storage

effective solution to ...
