With the ongoing scientific and technological advancements in the field, large-scale energy storage has become a feasible solution. The emergence of 5G/6G networks has enabled the creation of device networks for the Internet of Things (IoT) and Industrial IoT (IIoT). However, analyzing IIoT traffic requires specialized models due to its distinct characteristics ...

To improve economic benefits and promote renewable energy accommodation, we propose a shared energy storage business model between the DCC and the SISS considering the renewable energy uncertainties. Moreover, simulation results prove that the shared energy storage business model is a "win-win" for both SISS and the DCC.

This paper presents a conceptual framework to describe business models of energy storage. Using the framework, we identify 28 distinct business models applicable to modern power systems. We match the identified business models with storage technologies via overlaps in operational requirements of a busi-

In the first half of 2023, China's new energy storage continued to develop at a high speed, with 850 projects (including planning, under construction and commissioned projects), more than twice that of the same period last year. The newly commissioned scale is 8.0GW/16.7GWh, higher than the new scale level last year (7.3GW/15.9GWh). ...

Business Models. We propose to characterize a "business model" for storage by three parameters: the application of a storage facility, the market role of a potential investor, and the revenue stream obtained from its operation (Massa et al., 2017). An application represents the activity that an energy storage facility would perform to address a particular need for storing ...
