The world is set to add as much renewable power over 2022-2027 as it did in the past 20, according to the International Energy Agency. This is making energy storage increasingly important, as renewable energy cannot provide steady and interrupted flows of electricity. Here are four innovative ways we can store renewable energy without batteries.

“The report focuses on a persistent problem facing renewable energy: how to store it. Storing fossil fuels like coal or oil until it's time to use them isn't a problem, but storage systems for solar and wind energy are still being developed that would let them be used long after the sun stops shining or the wind stops blowing,” says Asher Klein for NBC10 Boston on MITETI's “Future of ...

Electrical batteries are commonly used in solar energy applications and can be used to store wind generated power. Lead acid batteries are a suitable choice as they are well suited to trickle charging and have a high electrical output charging efficiency. Compressed Air Storage.

Gravity batteries can store wind and solar energy. ... The idea sounds simple - when there is plenty of green energy, the batteries use the power to lift a heavy weight either high into the air or to the top of a deep shaft.
