The precooled Linde-Hampson (Fig. 6) cycle is a derivative of the simple Linde-Hampson system, in which the gaseous air is cooled before it enters the main heat exchanger, using a precooling subsystem. The precooling subsystem is typically either a closed cycle vapour compression refrigeration cycle, or a simple two fluid cooling heat exchanger ...

Thermal energy storage (TES) can be found at solar-thermal electric power plants that use concentrating solar power (CSP) systems. Such systems use concentrated sunlight to heat fluid, such as water or molten salt. While steam from the fluid can be used to produce electricity immediately, the fluid can also be stored in tanks for later use.
