In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6]. Fig. 1 shows the current global ...

Since photovoltaic energy sources operate at low voltage, typically boost converters are used for the high-voltage dc link. However, the high-boosted voltage causes significant power losses. This paper proposes a power-loss reduction scheme by using an energy storage connected between Boost-converter and Bidirectional-Converter in Cascade (BBCC). First stage, the boost ...
