The energy system of an EV can be subdivided into two main categories as an energy storage system and an energy consumption system. There are many technologies suitable for electric vehicle energy storage systems but the rechargeable battery remains at the forefront of such options.

Abstract: In order to mitigate the power density shortage of current energy storage systems (ESSs) in pure electric vehicles (PEVs or EVs), a hybrid ESS (HESS), which consists of a battery and a supercapacitor, is considered in this research. Due to the use of the two ESSs, an energy management should be carried out for the HESS.

The automotive industry is headed the direction of electric cars. There's no shortage of stats on where this industry is going: More than 2.3 million electric cars were sold in the first quarter of 2023, about 25% more than in the same period of 2022. McKinsey predicts the electric vehicle market will end up growing sixfold between 2021 and 2030 --to roughly 40 ...

Despite the availability of alternative technologies like "Plug-in Hybrid Electric Vehicles" (PHEVs) and fuel cells, pure EVs offer the highest levels of efficiency and power production (Plötz et al., 2021). PHEV is a hybrid EV that has a larger battery capacity, and it can be driven miles away using only electric energy (Ahmad et al., 2014a, 2014b).
