

Due to environmental reasons, more clean energy and transport means are increasingly introduced. For example, electric vehicles (EVs) are emerging as an alternative to traditional vehicles [1]. Lithium-ion batteries are the most commonly used battery type in EVs due to their high storage capacity [2] is estimated that the lithium-ion battery market will grow up ...

In this paper, we establish energy-hub networks as multi-energy systems and present a relevant model-predictive cascade mitigation control (MPC) scheme within the framework of energy hubs. The performance of both open- and closed-loop mitigation schemes is investigated for various energy storage scenarios. The results are illustrated using a small 11-hub network and a larger ...

Flexible dispatching method for park-level integrated energy systems considering energy cascade utilization
December 2022 IET Generation, Transmission and Distribution 17(08)

Integrated energy systems (IESs) integrate and coordinate multiple types of energy resources, which feature enhanced energy efficiency in a wide area. Herein, energy ...

According to energy cascade utilization theory, the IESP make decisions on the energy re-tail plan and energy scheduling. In the lower model, optimal energy consuming plan are given for EUs.

1 College of Energy and Electrical Engineering, Qinghai University, Xining, China; 2 Department of Electrical Engineering and Applied Electronics Technology, Tsinghua University, Beijing, China; The wind speed varies randomly over a wide range, causing the output wind power to fluctuate in large amplitude. An isobaric adiabatic compressed air energy storage system using a cascade ...

Recently, various works have been performed focusing on different energy phases of MCDES. On the production side, wide-spreading renewable solar and wind energies are harvested to drive MCDES [6]. For instance, the annual cost and life-cycle emission of a solar-wind-hydrogen MCDES were evaluated and planned [7], which reduced natural gas consumption and ...

Since three plants are optimized with the goal of minimizing the daily operating cost, the energy prices in the wholesale market, which are served as a unified boundary condition, are important to affect the simulation results of the waste heat cascade utilization.

performance ratings of energy storage devices have significant effect on cascade mitigation control in multi-energy systems. Specifically, we conclude that increasing energy storage ...

This study explores the influence of cascade utilization and Extended Producer Responsibility (EPR) regulation on the closed-loop supply chain of power batteries. Three pricing decision models are established

under the recycling model of the battery closed-loop supply chain are established in this paper: benchmark model, EPR regulatory model disregarding cascade ...

Results show that lifecycle zero-carbon battery can be achieved under energy paradigm shifting to positive, V2X interaction, battery cascade utilization and battery circular economy in various ...

The cascade utilization of retired lithium batteries to build an energy storage system is an effective means to achieve my country's dual-carbon goal, but safety issues restrict large-scale ...

In this paper, we establish energy-hub networks as multi-energy systems and present a relevant model-predictive cascade mitigation control (MPC) scheme within the framework of energy ...

Therefore, a cascade utilization of solar energy with solar heat collection process, phase change heat storage process and capillary radiation heating process is presented in this study. Firstly, a low temperature phase change material is tested and used as an energy storage pool, secondly, the capillary radiation heating is

To overcome this challenge, this paper proposes a multi-timescale flexible dispatching method to fully exploit the flexibility of PIES in the energy cascade utilization mode. The cascade utilization model for energy flow is firstly established to analyse the coupling and complementary of heterogeneous energy.

For a multiple IESs considering energy cascade utilization, the proposed ADMM-based decentralized optimization solution procedure is stated as follows. Step 1: Initialize the system variables. Sort participating plants ($a = 1 \dots q$, where q is the number of participating plants) and set the penalty coefficient r .

To sum up, the local energy storage controller, as the control unit of the energy storage system, plays a vital role in the system energy control and the energy management strategy optimization.

This is on the basis of the energy matching relationship among solar radiation, photovoltaic and photo-thermal modules, electrical and thermal loads on the demand side of the building, with multistage utilization of solar energy, low energy consumption, high energy efficiency, cascade storages and multi-functional coupling.

Internet is expected to increase terminal energy utilization efficiency through energy cascade utilization. Demand-side response based on big data and wide-area information platforms improves the utilization efficiency of energy production and transmission facilities [1]. Fig. 1. Schematic form of a typical local energy internet The development ...

In this study, the demand for cascade use of RTBs was defined as the capacity required for ancillary energy storage facilities in solar photovoltaic and wind-power plants. ...

He et al. [25] proposed a novel system for cascade utilization LNG cold energy, which includes cryogenic

energy storage, ORC and DC for data center. The cold energy of LNG can also bring considerable economic and environmental benefits when it is used in the transformation and preservation of agro-food and some cycles in the cold chain [26] .

Considering the electric-thermal coupling relationship at different thermal energy levels and utilizing the advantages of multi-energy complementarity, the energy flow structure of electric-thermal coupling cascaded utilization is shown in Fig. 9.4. From the energy perspective, it can be divided into electric power bus, steam bus, low-temperature hot water ...

Integrated energy systems (IESs) integrate and coordinate multiple types of energy resources, which feature enhanced energy efficiency in a wide area. Herein, energy cascading utilization technique is an effective way for multiple IESs to improve the energy utilization efficiency and reduce the operation cost by reutilizing the waste heat in ...

Using cascade utilization between multiple energy sources to realize multi-energy complementarity can significantly improve the economic benefits and energy utilization of integrated energy service providers. Integrated energy service providers consider the cascade utilization of energy in the regional energy system. Through the demand response ...

Energy cascade utilization techniques which were introduced in many applications can further improve CCHP energy efficiencies by reusing the residual energy, including the recycling of waste water, waste heat, etc. Medium- and low-temperature waste heat were reused by the compression refrigeration subsystem in .

In order to improve the energy utilization efficiency of electric-thermal port microgrid, this chapter proposed an energy comprehensive utilization optimization method on account of cascade ...

This paper researches and proposes a multi-scenario safe operation method of the energy storage system for the cascade utilization of retired power batteries, and establishes a safe operation model for the cascade utilization of retired power batteries and the rate of ...

In this system, the control of energy storage, regular equipment of power grid and intermittent energy supply have been integrated and coordinated with multi control targets in different time ...

Utilization of energy storage devices with optimal controller for multi-area hydro-hydro power system under deregulated environment *Sustain Energy Technol Assess*, 52 (2022), Article 102191 [View PDF](#) [View article](#) [View in Scopus](#) [Google Scholar](#)
