

Abstract As an economical and safer alternative to lithium, zinc (Zn) is promising for realizing new high-performance electrochemical energy storage devices, such as Zn-ion batteries, Zn-ion hybrid... Skip to Article Content; Skip to Article Information ... Zixun Yu is a graduating Ph.D. student supervised by Dr. Li Wei and Prof. Yuan Chen at ...

Photo-rechargeable energy storage devices pave a new way for directly utilizing solar energy, and therefore, the design and assembly of photo-assisted supercapacitors in order to realize the efficient storage of solar energy become increasingly important. In this study, a novel photo-assisted asymmetric supe

Xiao-Lei Li, Ke-Cheng Long, Gao Zhang, Wei-Tian Zou, Shuang-Quan Jiang, De-Yi Zhang, Jiang-Qi Zhou, Mei-Jun Liu, Guan-Jun Yang. Lead-Free Perovskite-Based Bifunctional Device for Both Photoelectric Conversion and Energy Storage. ACS Applied Energy Materials 2021, 4 (8), 7952-7958.

As the demand for flexible wearable electronic devices increases, the development of light, thin and flexible high-performance energy-storage devices to power them is a research priority. This review highlights the latest research advances in flexible wearable supercapacitors, covering functional classifications such as stretchability, permeability, self ...

The design of a novel photoelectric integrated system is considered to be an efficient way to utilize and store inexhaustible solar energy. However, the mechanism of photoelectrode under illuminate conditions is still unclear.

The use of broadband light energy is important for enhancing photoenergy conversion. However, bifunctional materials that can efficiently harvest solar energy to assist electrochemical energy storage are difficult to prepare. Herein, copper foam (CF)-supported cuprous sulfide (Cu₂S) heteroarrays (CS HAs) with enriched sulfur (S) vacancies (VS) were designed for photo ...

With a high theoretical specific energy, the non-aqueous rechargeable lithium-oxygen battery is a promising next-generation energy storage technique. However, the large charging overpotential ...

Jun Pan 1, Kaidi Yuan 1, Xin Mi 1,2, Yuan Lu 3, Yi Yu 3, Jian Yang 4 ... The integrated photoelectric battery serves as a compact and energy-efficient form for direct conversion and storage of solar energy compared to the traditional isolated PV-battery systems. ... The obtained solid-state photoelectric lithium-metal battery achieved a ...

a) Pictures of the hydrothermal reaction product aged for 4 h (yellow), 2 days (green), and 35 days (dark blue); TEM images of the samples in different aging time: b) 4 h, c) 2 days, and d) 35 days.

Energy Conversion of Hainan Province, Key Laboratory of Electrochemical Energy Storage and Light Energy Conversion Materials of Haikou City, Hainan Normal University, Haikou, 571158 P. R. China. Search for more papers by this author

The integrated photoelectric battery serves as a compact and energy-efficient form for direct conversion and storage of solar energy compared to the traditional isolated PV-battery systems. However, combining efficient light harvesting and electrochemical energy storage into a single material is a great challenge. Here, a bifunctional lead phytate-cesium lead bromide (PbPA ...

Moreover, all the reported examples focus on the application of energy conservation, for example, light-electric energy conversion and light-enhanced osmotic energy harvesting. 23, 47, 55 One missing aspect in this field is storage of the harvested energy in situ, 67 such as adenosine triphosphate (ATP) synthesis in biological systems. 68 To ...

Encouragingly, major breakthrough has been made in Li-O₂ and Zn-air batteries by aid of photo assistance. By constructing the hybrid nanostructures of TiN/TiO₂@carbon cloth (TT@CC, as seen in Figure 1 A), it could efficiently realize that the subtle integration of solar energy into the Li-O₂ battery during the charge process is a promising strategy to compensate ...

A groundbreaking photo-assisted lithium-sulfur battery (LSB) is constructed with CdS-TiO₂/carbon cloth as a multifunctional cathode collector to accelerate both sulfur reduction reaction (SRR) during the discharge process and sulfur evolution reaction (SER) during the charge process. Under a photo illumination, the photocatalysis effect derived from the photo ...

The aggregation and low conductivity of layered double hydroxides (LDHs) limit their practical applications in energy conversion and storage. Herein, NiMn-LDHs were anchored on the surface of Ti₃C₂ MXene sheets using an in situ crystallization process. Chemical bonds have been demonstrated as the main linkage between MXene and NiMn-LDH to inhibit structure ...

The integrated photoelectric battery serves as a compact and energy-efficient form for direct conversion and storage of solar energy compared to the traditional isolated PV ...

Hybrid halide perovskites have emerged promising energy-storage materials due to their high ionic and electronic conductivity. They can be used in rechargeable batteries, photo-rechargeable ...

Ab initio first-principles calculations were carried out to investigate lithium-dispersed two-dimensional carbon allotropes, viz. graphyne and graphdiyne, for their applications as lithium storage and hydrogen storage materials. The lithiation potentials (vs Li/Li⁺) and specific capacities in these materials are found to be enhanced considerably as compared to the ...

Solar cells serve as energy harvesters, and lithium (Li) secondary batteries or capacitors serve as energy stores

in integrated energy modules for self-charging. Within these integrated energy modules, the photoelectric storage efficiency (PSE) is a crucial property for continuous power supply to electronic devices.

The lithium-oxygen (Li-O₂) batteries are recently attracting increasing research attention because of their higher specific energy density compared with conventional Li-ion batteries 1, 2, 3, 4, 5, 6, 7.

Different atomic arrangements lead to the changes of the electronic structures, which in turn affect the voltages, the diffusion dynamics, and relevant electrochemical properties of the materials. In this study, the inherent properties and lithium storage mechanism of polymorphic LiNbWO₆, tetragonal and hexagonal phases, are investigated in detail via ...

The energy storage devices, like Li-ion battery [17], [18] ... A series of researches around wire-shaped "energy fiber" have demonstrated good photoelectric conversion and energy storage efficiencies and the outstanding flexibility and stability make it very promising for the ... Dapeng Yu is a Chang Kung professorship in Physics in School ...

Nature Communications 5, Article number: 5111 (2014) Cite this article With a high theoretical specific energy, the non-aqueous rechargeable lithium-oxygen battery is a promising next-generation energy storage technique.

Using DAPbI as a cathode, an integrated photo-assisted LIB is realized, with a 0.2 V reduction in charge voltage, a 0.1 V increase in discharge voltage, enhancements of 7.4% in roundtrip ...

Simultaneous energy harvesting and storage via solar-driven regenerative electrochemical cycles+ Yu Ding,a§ Xuelin Guo,a§ Katrina Ramirez-Meyers,a Yangen Zhou,a Leyuan Zhang,a Fei Zhaoa and Guihua Yu*a Solar energy is regarded as the most promising source of electricity considering its large magnitude on earth every day.
