Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.

The grid-based sharing energy storage technology, called cloud energy storage (CES) is proposed in, which provides users with energy storage services on-demand, anytime, anywhere. Users could subscribe to the energy storage service from the CES operator to meet their storage needs while saving the cost of investment in storage device [ 28 ].

Cloud energy storage (CES) in the power systems is a novel idea for the consumers to get rid of the expensive distributed energy storages (DESS) and to move to using a cloud service centre as a virtual capacity.

1 INTRODUCTION 1.1 Motivation and background.
